## I. INTRODUCTION

The Food Stamp Program (FSP) is a central component of America's anti-poverty program. The major purpose of the FSP is "to permit low-income households to obtain a more nutritious diet . . . by increasing their purchasing power" (The Food Stamp Act of 1977, as amended, P.L. 95-113). The FSP is the largest of the domestic food and nutrition assistance programs administered by the U.S. Department of Agriculture's Food and Consumer Service (FCS). During fiscal year 1996, the FSP served an average of 25.5 million persons per month. Almost \$22.5 billion were paid out in food stamps that year.

The characteristics of food stamp households and the level of FSP participation change over time in response to economic and demographic trends, and to legislative changes in eligibility requirements. To track these changes and measure their effect on the FSP, FCS relies on data from the QC database, which is an edited version of the FSP's Integrated Quality Control System (IQCS) database. The IQCS database contains detailed demographic, economic, and FSP eligibility information for a nationally representative sample of approximately 60,000 FSP units. The IQCS data are generated from monthly quality control (QC) reviews of FSP cases that are conducted by state FSP agencies to assess the accuracy of eligibility determinations and benefit calculations for the state's FSP caseload. These data, which are produced annually, are ideal for tabulations of the characteristics of food stamp units and for simulating the impact of various reforms to the FSP on current FSP units.

This document describes the variables in the QC database and how the IQCS data are cleaned and edited to create the QC database. It also describes how the QC Minimodel--one of FCS's food stamp microsimulation models--uses the QC data to simulate the impact of various reforms to the FSP on current FSP participants. Although this document is designed to be general enough for analysts and

new users of the data, programmers will find enough detailed information to re-create the file, tabulate the file, or use the file in the QC Minimodel.

The overview of the QC database (Section 1 of this document) describes the FSP's Quality Control System, the IQCS data that are the result of that system, and how the IQCS data are transformed into the QC database. The overview, written for a nontechnical audience, is designed to give analysts and new users of the data enough general information about the data to analyze and interpret the results of tabulations and QC Minimodel reform simulations.

The creation of the QC database (Section 2) details the QC database file development process. Section II, written for a technical audience, describes each program used to transform the IQCS data into the QC database.<sup>1</sup> It also presents the algorithms used in the program that edits the IQCS data for consistency and describes the development of the weights for the file.

The creation of the database-specific portion of the QC Minimodel (Section 3) explains how the QC data are used by the QC Minimodel to simulate reforms to the FSP. This section documents the database-specific algorithms used by the model. It also provides a technical description of the procedures used to transform data elements from the QC database into the data elements required as input to the model.

The codebook (Section 4) describes each variable in the QC database and includes the variable name, its origin, and a description that includes all the valid values of the variable. The section also explains how to use the codebook.

Appendix A describes the automated edits to FSP units with Aliens. Appendix B shows the derivation of monthly sampling weights used in the QC file. Appendix C contains the parameter

---

<sup>1</sup>A SAS version and two binary versions of the QC database are created. The SAS file is used for tabulations of the characteristics of FSP households. One binary file is used to tabulate the characteristics of FSP households with Table Producing Language software, and the other binary file is used as the underlying database for FCS's QC Minimodel.

values used in determining FSP eligibility in FY 1996 for parameters such as the FSP net income screen and maximum benefit levels. Appendix D lists the state and region identification codes used in the file, and Appendix E contains the Integrated Review Schedule--the coding form on which the raw data for the IQCS file is originally recorded by the state QC System reviewers.

### **Key Changes from 1995 QC Database**

The major changes since the previous QC database are the addition of three new variables, FSCSEXP, MTHWGT, and COUNTYCD. FSCSEXP is the reported child support expense deduction which allows those paying child support to deduct the amount before the food stamp benefit amount is calculated. MTHWGT is the corrected monthly weight variable (see chapter V for more information) which should be used instead of the HWGT variable. Additionally, COUNTYCD has been added which is the FIPS county code and can be used to identify specific geographic areas within the QC database.

## **SECTION 1**

### **OVERVIEW OF THE QC DATABASE**

## **II. OVERVIEW OF THE QC DATABASE**

The QC database is an edited version of the Food Stamp Program's Integrated Quality Control System (IQCS) database. The IQCS database contains detailed demographic, economic, and FSP eligibility information for a nationally representative sample of approximately 60,000 FSP units.<sup>1</sup> These data, which are produced annually, are ideal for tabulations of the characteristics of food stamp units and for simulating the impact on current FSP units of various reforms to the FSP. This overview describes the raw IQCS file and the processing and edits that convert it to the QC database.<sup>2</sup>

### **A. THE QC SYSTEM**

The IQCS data are generated from monthly quality control (QC) reviews of FSP cases that are conducted by state FSP agencies. The primary objective of the QC review is to assess the accuracy of eligibility determinations and benefit calculations. That is, the review is designed to measure (1) if units are eligible for participation and receiving the correct coupon allotment, and (2) if unit participation is correctly denied or terminated. QC reviews are essentially an audit through which states are held accountable for the accuracy of FSP certification.

The Quality Control System is based on a national sample of participating units and a somewhat smaller number of denials and terminations. The national sample of participating units is stratified by month and by the 50 states, the District of Columbia, Guam, and the Virgin Islands. Annual state

---

<sup>1</sup>The term "FSP unit" refers to the persons in a household who together are certified for and receive food stamps. The term "FSP household" refers to all persons who reside together in a household that contains at least one person receiving food stamps. As such, an FSP household may contain non-FSP persons and/or multiple FSP units. Any references in the text to "unit" refer only to those persons in the household's primary FSP unit (that is, the FSP unit selected for the sample). Any references to "household" refer to the FSP unit as well as any other persons in the same household as the FSP unit.

<sup>2</sup>Section II (Creation of the QC Database) provides more technical information on the QC file development process.

samples range from 300 to 2,400 reviews, depending on the size of the monthly participating caseload. Several states have integrated Food Stamp, Aid to Families with Dependent Children (AFDC), and Medicaid QC sample selection and review processes.

IQCS data are collected by state QC reviewers, who gather financial and demographic information from the sampled household's case file, visit the household and re-interview the participants, determine whether the household received the correct FSP coupon allotment, enter all review information on a data coding form, and then send the coding form to FCS's national computer center where it is entered into the IQCS database. FCS regional offices then conduct a federal re-review of a subsample of the original state sample. Federal re-review data is sent to the national computer center where it is entered into the IQCS database and used in conjunction with the state review data to calculate the official payment error rate for each state. States are sanctioned or rewarded on the basis of their official payment error rates.

Although calculating state payment error rates is the primary objective of the QC system and its resulting IQCS file, the IQCS also functions as an important source of detailed demographic and financial information on a large sample of active food stamp households in a given fiscal year. The IQCS data are the source for FCS's annual report entitled *Characteristics of Food Stamp Households* and for FCS's QC Minimodel, a microsimulation model that estimates the impact of proposed reforms to the FSP on current participants.

## **B. THE IQCS SAMPLE**

Each month, food stamp agencies in all 50 states, the District of Columbia, Guam, and the Virgin Islands draw two samples: one of households receiving food stamps in their state (active cases), and another, smaller sample of households that were either terminated from the program or applied for the program but were denied benefits in their state. While almost all participating food stamp units are

included in the sample of active cases, certain types of units not appropriate for QC review are excluded. Specifically, the active cases universe includes all units receiving food stamps during a review period except cases in which the participants died or moved outside the state, received benefits by a disaster certification authorized by the FCS, received benefits under a 60-day continuation of certification, were under investigation for FSP fraud (including those with pending fraud hearings), were appealing a notice of adverse action and the review date falls within the period covered by continued participation pending hearing, or received restored benefits in accordance with the FCS-approved state manual but who were otherwise ineligible. The sampling unit within the active universe is the food stamp unit as defined in an FCS-approved state manual.

State sampling plans must conform to accepted principles of probability sampling. A state may use simple random sampling or any of various complex designs that best meet its needs. Sampling designs other than simple random sampling must be approved by FCS.

Annual state sample sizes range from a minimum of 300 to 2,400 reviews depending primarily on the size of the monthly participating caseload. States must use the following guidelines when determining its annual QC sample sizes:

- If the average monthly caseload is under 10,000, then the minimum sample size is 300 cases per year.
- If the average monthly caseload is over 60,000, then the standard minimum sample size is 2,400 cases per year and the optional minimum size (defined below) is 1,200 per year.
- If the average monthly caseload is between 10,000 and 60,000, the standard and optional minimum samples are derived by the following formulas:

$$\text{Standard minimum} = 300 + 0.042 (N - 10,000)$$

$$\text{Optional minimum} = 300 + 0.018 (N - 10,000),$$

where N is the average monthly caseload

A state may choose the optional minimum sample size if it agrees not to dispute later payment error rate findings and the associated sanctions on the basis of the precision of the estimates.

Federal subsamples are drawn from the set of all state-completed cases for a given fiscal year. The size of the federal subsample varies from 150 to about 800 cases per year, depending on the state sample size.

## **C. CREATION OF THE QC DATABASE FROM THE IQCS DATA**

The QC database is created from the IQCS data through five steps: (1) preliminary processing, (2) data editing, (3) variable construction, (4) weighting, and (5) edits to households with aliens.<sup>3</sup>

### **1. Preliminary Processing**

The IQCS data is first converted to a SAS file. A series of quality control counts and frequency distributions for the values of each variable on the file are then generated and inspected. Data that are out of range, missing from the file, or coded as unknown on the source file are assigned missing value codes. Records coded as having an incomplete QC review are then removed from the file.<sup>4</sup>

### **2. Data Editing**

Measures of unit size, income, and benefit level are very important to any analysis of food stamp households. There are several ways to obtain these measures from the IQCS. The raw data file contains both a reported certified unit size and an affiliation flag for each person in the household. A unit size can be calculated from each. There is a reported unit gross income level as well as reported income amounts for each person for each type of income. These amounts can be summed to obtain unit-level gross income. Values are also reported for net income and benefits, both of which can also

---

<sup>3</sup>Section II (Creation of the QC Database) describes the file creation process in more detail.

<sup>4</sup>Records with an incomplete review are defined as REVDISP not equal to 1 (review completed).

be calculated on the basis of values for gross income, total deductions, and unit size. Data for these measures are inconsistent for a number of records on the IQCS file. For instance, the sum of the income of each person in the unit may not equal reported gross income. Such inconsistencies can be rooted in the initial case record information, the transcription and data entry process, or the extraction of the food stamp information for the selected months. It is important to ensure that the various measures of unit size, income, and benefits are consistent, since inconsistencies can interface with a reliable analysis, particularly in analyses of program changes.

The overall strategy of the IQCS editing process is to ensure that certain basic relationships hold for all cases. The two most basic relationships that should hold for the reported program variables are:

- Net income must equal gross income minus the total deductions for which the unit is eligible.
- The food stamp benefit level must equal the maximum benefit for that unit size minus 30 percent of net income.

In addition, several key relationships must hold for some final and intermediate variables. For example:

- Unit size must equal the number of people coded as affiliated with the food stamp case under review.
- Gross unit income must equal the sum of all person-level income amounts.
- Earned income deduction must equal 20 percent of unit earned income.
- Medical deduction must equal medical expenses over \$35 for units with an elderly or disabled person.
- Excess shelter deduction must equal shelter costs above 50 percent of gross income minus all other deductions up to a cap. Units that contain elderly or disabled members are not subject to the cap.

- Total deductions must equal the sum of the standard deduction and any earned income deduction, medical deduction, excess shelter deduction, dependent care deduction or child support expenditure.

The process by which the editing program determines whether a case is internally consistent and the edits performed if the case is not consistent, is fairly complex and described in detail in Section 2 of this document.

### 3. Variable Construction

A number of variables are constructed from the reported data once the file is edited. The major classes of constructed variables are unit-level income variables, FSP eligibility and benefit determination variables, characteristics flags, and geographic region variables.

- ***Unit-level income variables.*** The total FSP unit income variable of a particular type is constructed by summing the person-level income of that type over all persons in the FSP unit and then summing the unit income of each particular type.

- ***FSP eligibility and benefit determination variables.*** Variables used to determine eligibility and benefits--such as FSP unit deductions, FSP unit net countable income, and FSP unit benefits--are constructed on the basis of unit income and demographic characteristics.
- ***Characteristics flags.*** Characteristics flags are created to identify units with certain features, such as the presence of an elderly or disabled person. In addition, data from the Area Resource File (ARF) are merged to identify whether a unit resides in an urban or rural area.

### 4. Weighting

The original weights on the file are adjusted proportionally so that they replicate, by state, the monthly number of FSP units as reflected in the FSP operations data. Program operations figures are derived from FCS's National Data Bank and reflect actual levels of participation and benefit issuance. Thus, the weighted number of households on the QC database matches program operations figures.

The QC file does not, however, have a person-level weight. Therefore, weighted QC database estimates of the number of FSP participants do not necessarily match program operations totals.<sup>5</sup>

## **5. Edits to FSP Units with Aliens**

Data on aliens reported in the IQCS and subsequently edited in the creation of the QC database is sometimes inconsistent. These inconsistencies make reform simulations involving aliens slow and relatively inaccurate. Because of this, data on aliens are edited during the initial data editing process (that is, in step 2 above).

## **D. FINAL QC DATABASE**

After the QC database is created through the preceding five steps, a SAS version and two binary versions of the file are created. The SAS file is used for tabulations of the characteristics of FSP households. One binary file is used to tabulate the characteristics of FSP households with Table Producing Language software, and the other binary file is used as the underlying database for FCS's QC Minimodel microsimulation model.

---

<sup>5</sup>Sampling error should cause random differences between QC database estimates of the number of FSP participants and the actual number of FSP participants. Nevertheless, the QC database consistently overestimates the number of FSP participants and consistently underestimates total FSP benefits. The discrepancies are small in magnitude and consistent in their direction. A detailed discussion of this anomaly and its possible causes are described in a memorandum to Alana Landey and Jenny Genser of FCS from Mike Stavrianos of MPR ("Investigation of the Differences Between QC Database and Program Operations Counts of FSP Participants and Benefits," 3/5/96).

## **SECTION 2**

### **CREATION OF THE QC DATABASE**

### III. FISCAL YEAR 1996 QC FILE DEVELOPMENT PROCESS

The following is a description of the programs and data used in the development of the 1996 QC file.<sup>1</sup> The development process is also illustrated in Figure III-1.

#### Step 1.

The 1996 FCS data was downloaded from 9 track tape to PC disk:

INPUT TAPE:   Tape U01996, Labeled, 6250 BPI, Character format (EBCDIC)  
                  Record length 1,926; Block size 19,260  
                  57,643 Records

OUTPUT FILE:   FNS96.RAW   (ASCII, 57,643 Records)

#### Step 2.

Specified fields from the raw FCS file were converted to SAS format, the unique record identifier HHLNo was created, and stratum codes were corrected to reflect FCS's updated specifications.

PROGRAM NAME:   SASIFY96.SAS

INPUT FILE:       FNS96.RAW       (ASCII, 57,643 Records)

OUTPUT FILE:      QCFY9601.SD2   (57,643 Records, 438 Variables)

#### Step 3.

Preliminary frequencies were run on the SAS file. The frequencies were checked for evidence of data corruption, consistency across areas and months, and the extent of missing and out-of-range data.

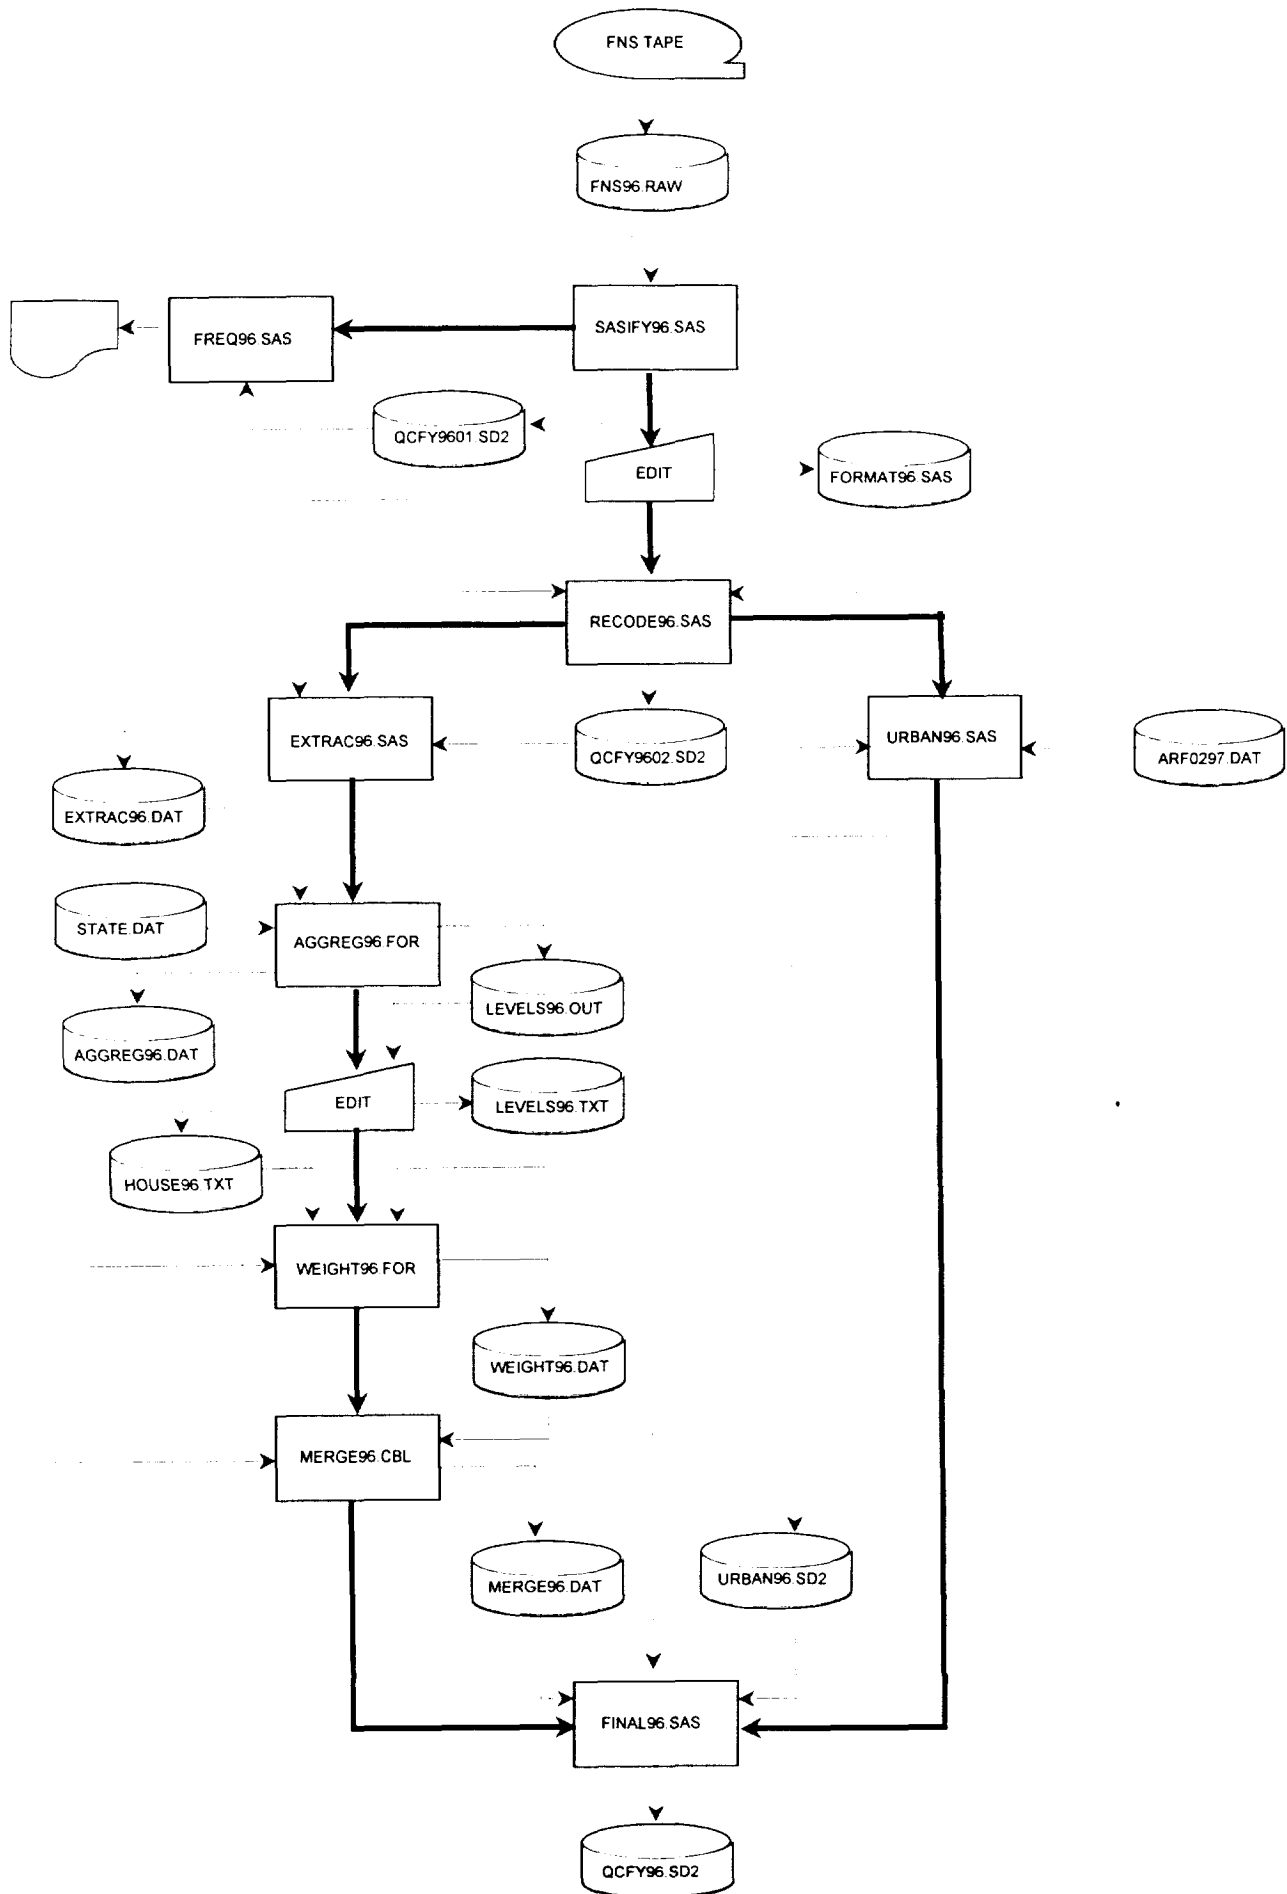

PROGRAM NAME:   FREQ96.SAS

INPUT FILE:       QCFY9601.SD2   (57,643 Records, 438 Variables)

---

<sup>1</sup>A copy of the computer programs used in the development of the FY1996 QC database is available upon request from FCS.

FIGURE III 1 FISCAL YEAR 1996 IQCS FILE DEVELOPMENT PROCESS

#### **Step 4.**

A hand-entered program parameters format library containing format values for maximum benefit and income screen was constructed. This program was used in Step 5.

OUTPUT PROGRAM:   FORMAT96.SAS

#### **Step 5.**

An edit program created several unit-level variables pertaining to FSP affiliation, income deductions, shelter limit, benefit amount, assets, poverty status, and specific types of income. Income and asset values that were considered out-of-range were set to missing. Inconsistencies between person-level income totals and reported totals were detected and resolved using a procedure that first selects the most appropriate unit-level income and deduction amounts, then edits the person-level income amounts so that the totals will match the selected amounts. This procedure is described in detail in chapter IV. Units meeting the following conditions were written to the output file: (1) completed review; (2) contain at least one FSP participant under review; and (3) receive a benefit amount of at least one dollar.

PROGRAM NAME:   RECODE96.SAS

INPUT FILES:       QCFY9601.SD2   (57,643 Records, 438 Variables)  
                    FORMAT96.SAS (Format library)

OUTPUT FILES:     QCFY9602.SD2   (50,883 Records, 505 Variables)

#### **Step 6.**

An extract of the unedited IQCS file was created for use in the weighting process. The variables extracted were HHLDNA, REGIONCD, STATE, STRATUM, YRMONTH and REVDISP. A flag was also created to indicate presence of the unit in the edited file. The extract file was sorted by STATE, STRATUM and YRMONTH in preparation for the weighting.

PROGRAM NAME:   EXTRAC96.SAS

INPUT FILES:       QCFY9601.SD2   (57,643 Records, 438 Variables)  
                    QCFY9602.SD2   (50,883 Records, 505 Variables)

OUTPUT FILE:      EXTRAC96.DAT (ASCII, 57,643 Records)

#### **Step 7.**

Counts of units were obtained for each state/stratum/month combination, one set for units on the unedited IQCS file, and one set for units on the edited file. This information was written to AGGREG96.DAT. The LEVELS96.OUT file contains the State name, FIPS code, and stratum, with one record per State/stratum combination.

PROGRAM NAME: AGGREG96.FOR

INPUT FILES:        EXTRAC96.DAT (ASCII, 57,643 Records)  
                     STATE.DAT     (ASCII, 54 Records)  
                                     STATE.DAT contains one record per State (plus  
                                     records for Guam, the Virgin Islands, and unknown  
                                     State).  
  
OUTPUT FILES:       AGGREG96.DAT (ASCII, 166 Records)  
                     LEVELS96.OUT (ASCII, 83 Records)

**Step 8.**

The LEVELS96.OUT file was edited by hand to add interval information (obtained from FCS) for each State/stratum combination. The edited file was saved as LEVELS96.TXT.

INPUT FILE:        LEVELS96.OUT     (ASCII, 83 Records)  
  
OUTPUT FILE:       LEVELS96.TXT     (ASCII, 83 Records)

**Step 9.**

HOUSE96.TXT was created by modifying a unit-level participation file containing program operations data from FCS. The FCS spreadsheet file was converted to an ASCII file, and then was sorted and modified to match the read format specification in WEIGHT96.FOR.

INPUT FILE:        FCS spreadsheet file containing participation numbers (HH96.WKS)  
  
OUTPUT FILE:       HOUSE96.TXT     (ASCII, 53 Records)

**Step 10.**

A weight was calculated for each State/stratum/month combination.

PROGRAM NAME: WEIGHT96.FOR

INPUT FILES:       AGGREG96.DAT (ASCII, 166 Records)  
                     LEVELS96.TXT (ASCII, 83 Records)  
                     HOUSE96.TXT (ASCII, 53 Records)  
  
OUTPUT FILE:       WEIGHT96.DAT (ASCII, 858 Records)

**Step 11.**

The weights were merged onto the extract file by State, stratum and month; this produced a file containing every unit from the unedited IQCS file and its corresponding weight.

PROGRAM NAME: MERGE96.CBL

INPUT FILES:       EXTRAC96.DAT (ASCII, 57,673 Records)  
                  WEIGHT96.DAT (ASCII, 858 Records)

OUTPUT FILE:       MERGE96.DAT (ASCII, 57,643 Records)

#### **Step 12.**

Using the local area code, a county FIPS code was assigned to each unit on the edited QC file. Then each unit was merged to the 1997 Area Resource File (ARF) using State and county codes. The PMSA code on the ARF file was used to create an urban/rural status variable.

PROGRAM NAME: URBAN96.SAS

INPUT FILES:       QCFY9602.SD2 (50,883 Records, 505 Variables)  
                  ARF0297.DAT (ASCII, 3,082 Records)  
                                ARF0297.DAT is the 1997 Area Resource File.

OUTPUT FILE:       URBAN96.SD2 (50,883 Records, 6 Variables)

#### **Step 13.**

The files containing weights and urban/rural flags were merged with the edited QC file, to produce the final Fiscal Year 1996 QC file.

PROGRAM NAME: FINAL96.SAS

INPUT FILES:       QCFY9602.SD2 (50,883 Records, 505 Variables)  
                  MERGE96.DAT (ASCII, 57,643 Records)  
                  URBAN96.SD2 (50,883 Records, 6 Variables)

OUTPUT FILE:       QCFY96.SD2 (50,883 Records, 507 Variables)

#### **Step 14.**

Using the final QC SAS file, this step creates a hierarchical binary file for the QC Minimodel. Here SAS missing values are coded to negative values. See chapter VI. for more details.

PROGRAM NAME: MINIQC96.SAS

INPUT FILES:       QCFY96.SD2 (50,883 Records, 507 Variables)

OUTPUT FILE:       MATHPC.BIN (50,883 Household records, 140,480 Person records)

### **Step 15.**

Using the final QC SAS file, this step creates a hierarchical binary file which is to produce tables with Table Producing Language software. The program also creates a codebook for the Table Producing Language software. SAS missing values are coded to negative values. Additional household level recodes are created for use in table generation.

PROGRAM NAME:   ADDQC96.SAS

INPUT FILES:       QCFY96.SD2       (50,883 Records, 507 Variables)

OUTPUT FILE:       ADDQC96.BIN   (50,883 Household records, 140,480 Person records)  
                    ADDQC96.CBK

#### IV. OBTAINING FILE CONSISTENCY

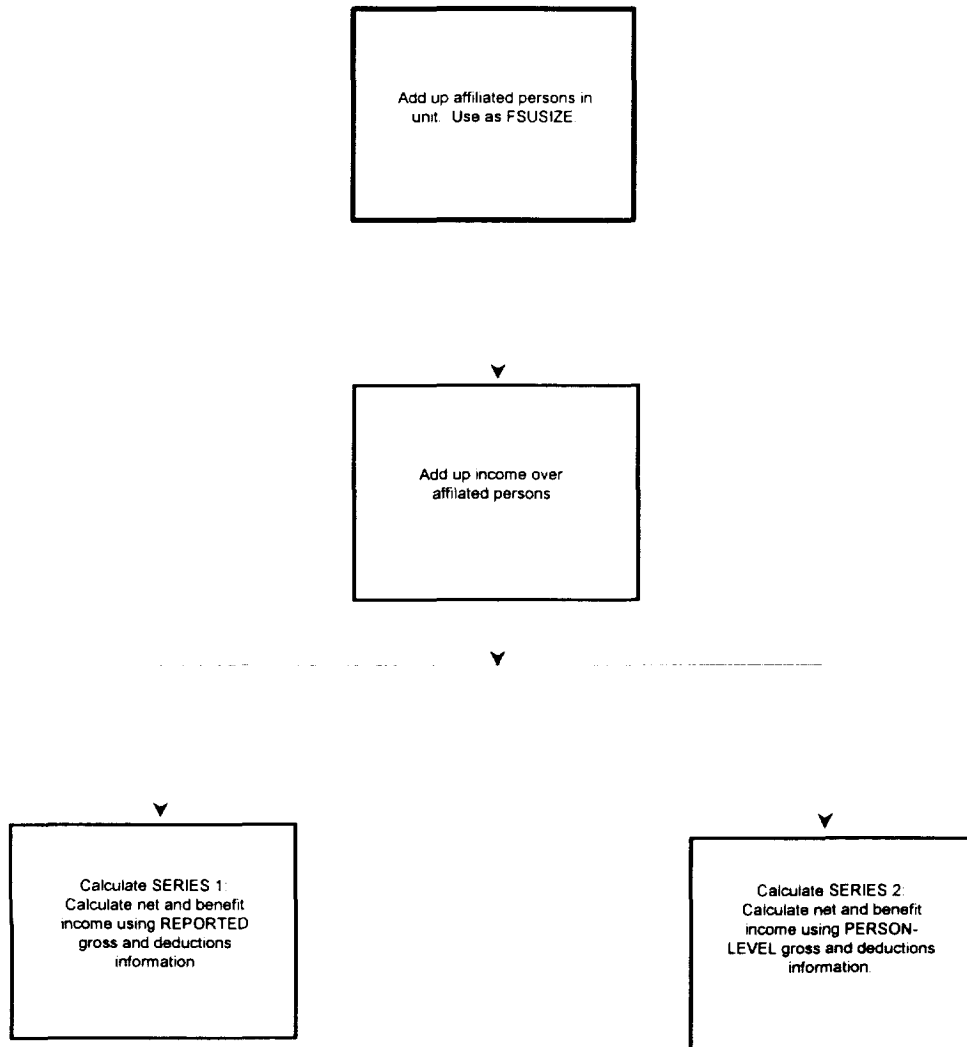

To obtain the highest possible degree of consistency between person-level and unit-level data, while at the same time maintaining the integrity of the database, it is necessary to perform selected editing of the reported data. Since fiscal year 1989, we have implemented a consistent editing scheme as submitted to FCS (“Strategies for Editing the Food Stamp Quality Control Data”, April 1989, Patty Anderson). The following is a brief description of the procedures used to obtain file consistency. For more detail, please refer to the RECODExx.SAS program.

The first task is to reconcile unit size with the number of people receiving food stamps. Checks are then made for out-of-range income values for each affiliated person, and out-of-range asset values for each unit. For person-level income values, any amount that is over 2.5 times the poverty level is set to missing. For unit assets, the upper limit is 2.5 times the asset limit, and any asset value above the upper limit is set to missing. The next task is to reconcile reported person-level income amounts with calculated and reported unit-level income and deduction variables. To reconcile any differences in these measures, the following steps are performed (Figures IV.1 and IV.2):

- (1) We first use the affiliation flags on each person in the unit to construct a measure of unit size as the number of members in the food stamp unit under review. A person is considered to be in the food stamp unit if FSAFILi is between 10 and 20.
- (2) We then construct a measure of unit gross income by adding together all affiliated persons' earned incomes that are not exempt (earned income amounts for students under 18 are excluded) and unearned incomes. Earned income variables are WAGESi, SLFEMPi and OTHERNi. Unearned income variables are SSli, AFDCi, CONTi, DEEMi, OTHGOVi, EDLOANi, OTHUNi, SOCSECI, GAi, UNEMPi, VETi, WCOMPi and CSUPRTi.
- (3) We construct two different scenarios for the correct FSP benefit. For the first scenario, called Series 1, we use reported unit gross income and the reported earned income deduction, and then calculate net income and benefit values. For Series 2, we use reported person-level gross income, calculate the earned income deduction, and then calculate net income and benefit values. For both scenarios, the standard, medical, and dependent care expenses deductions are identical.

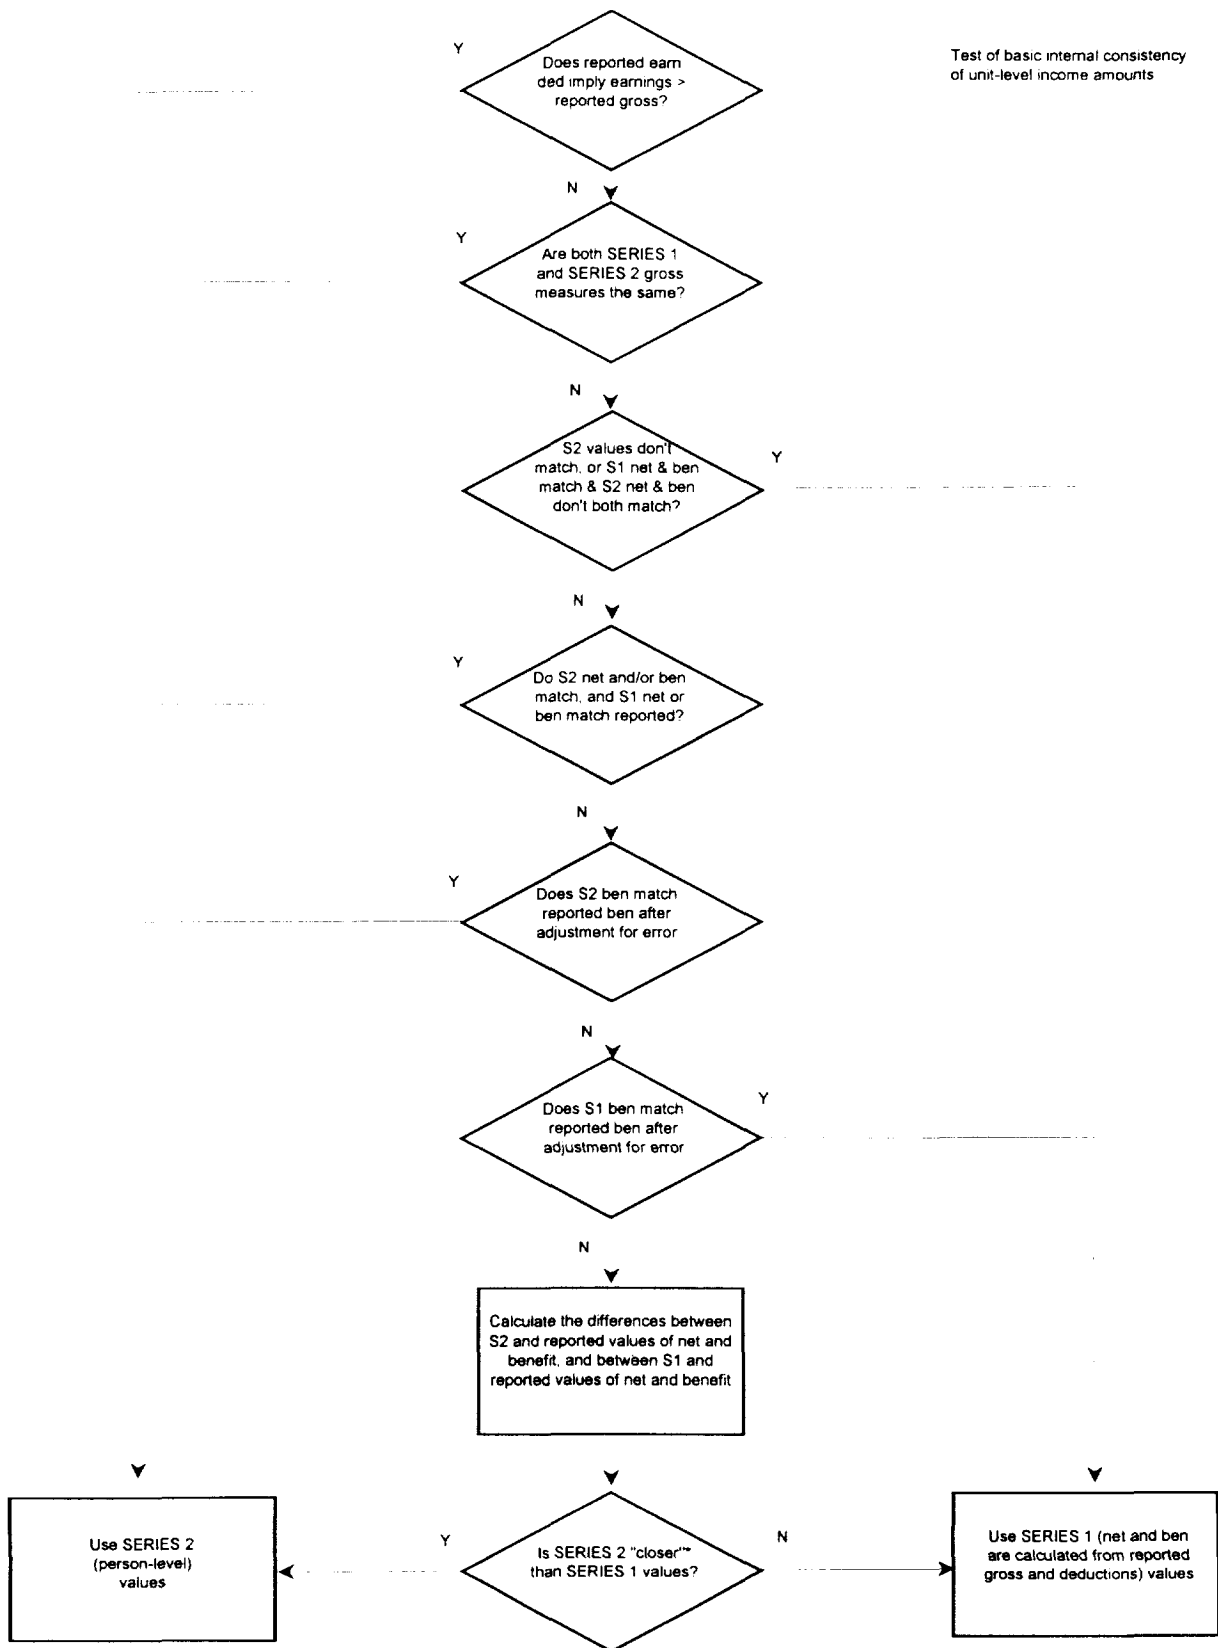

FIGURE IV.1 QC EDITING SCHEME

- A. Determine FSP unit size
- B. Sum income across persons
- C. Calculate alternative unit-level (SERIES 1)  
and person-level (SERIES 2) income and  
benefit amounts

D. Determine which series is most consistent with reported bonus and net income and choose that gross income

\* "Closer" means that  $(S2\ ben - report\ ben)^2 + (S2\ net - report\ net)^2 < (S1\ ben - report\ ben)^2 + (S1\ net - report\ net)^2$

FIGURE IV.1 QC EDITING SCHEME CONT'D

- E. Reconcile the person-level earnings with the selected earned income deduction (as decided in D)
- F. Reconcile the person-level unearned income with the selected gross income (as decided in D)
- G. Calculate all final values

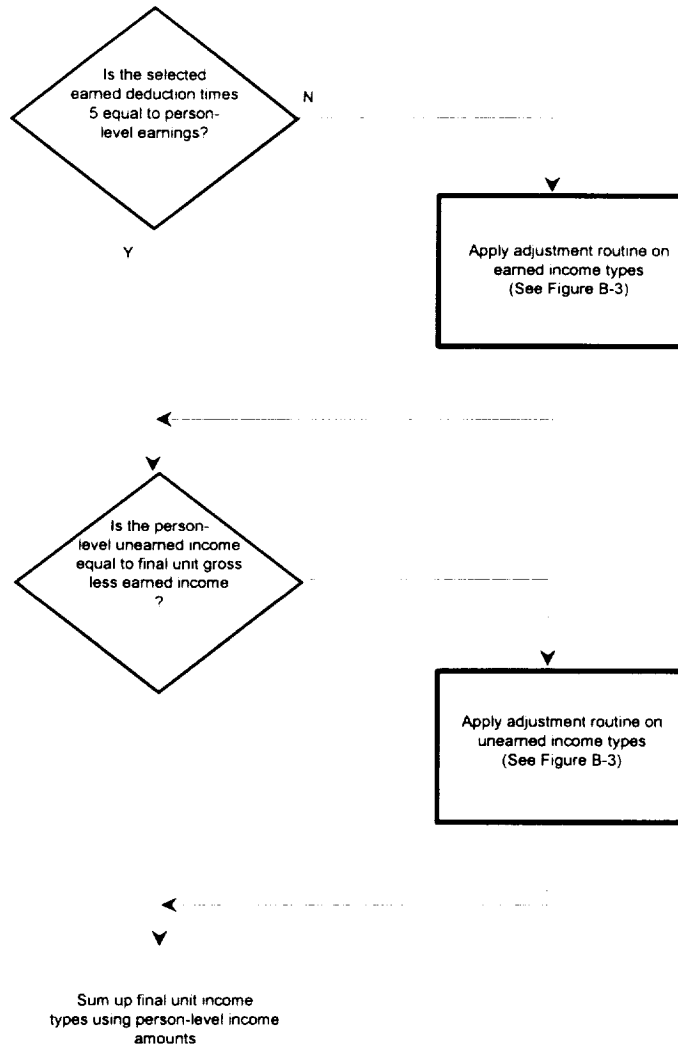

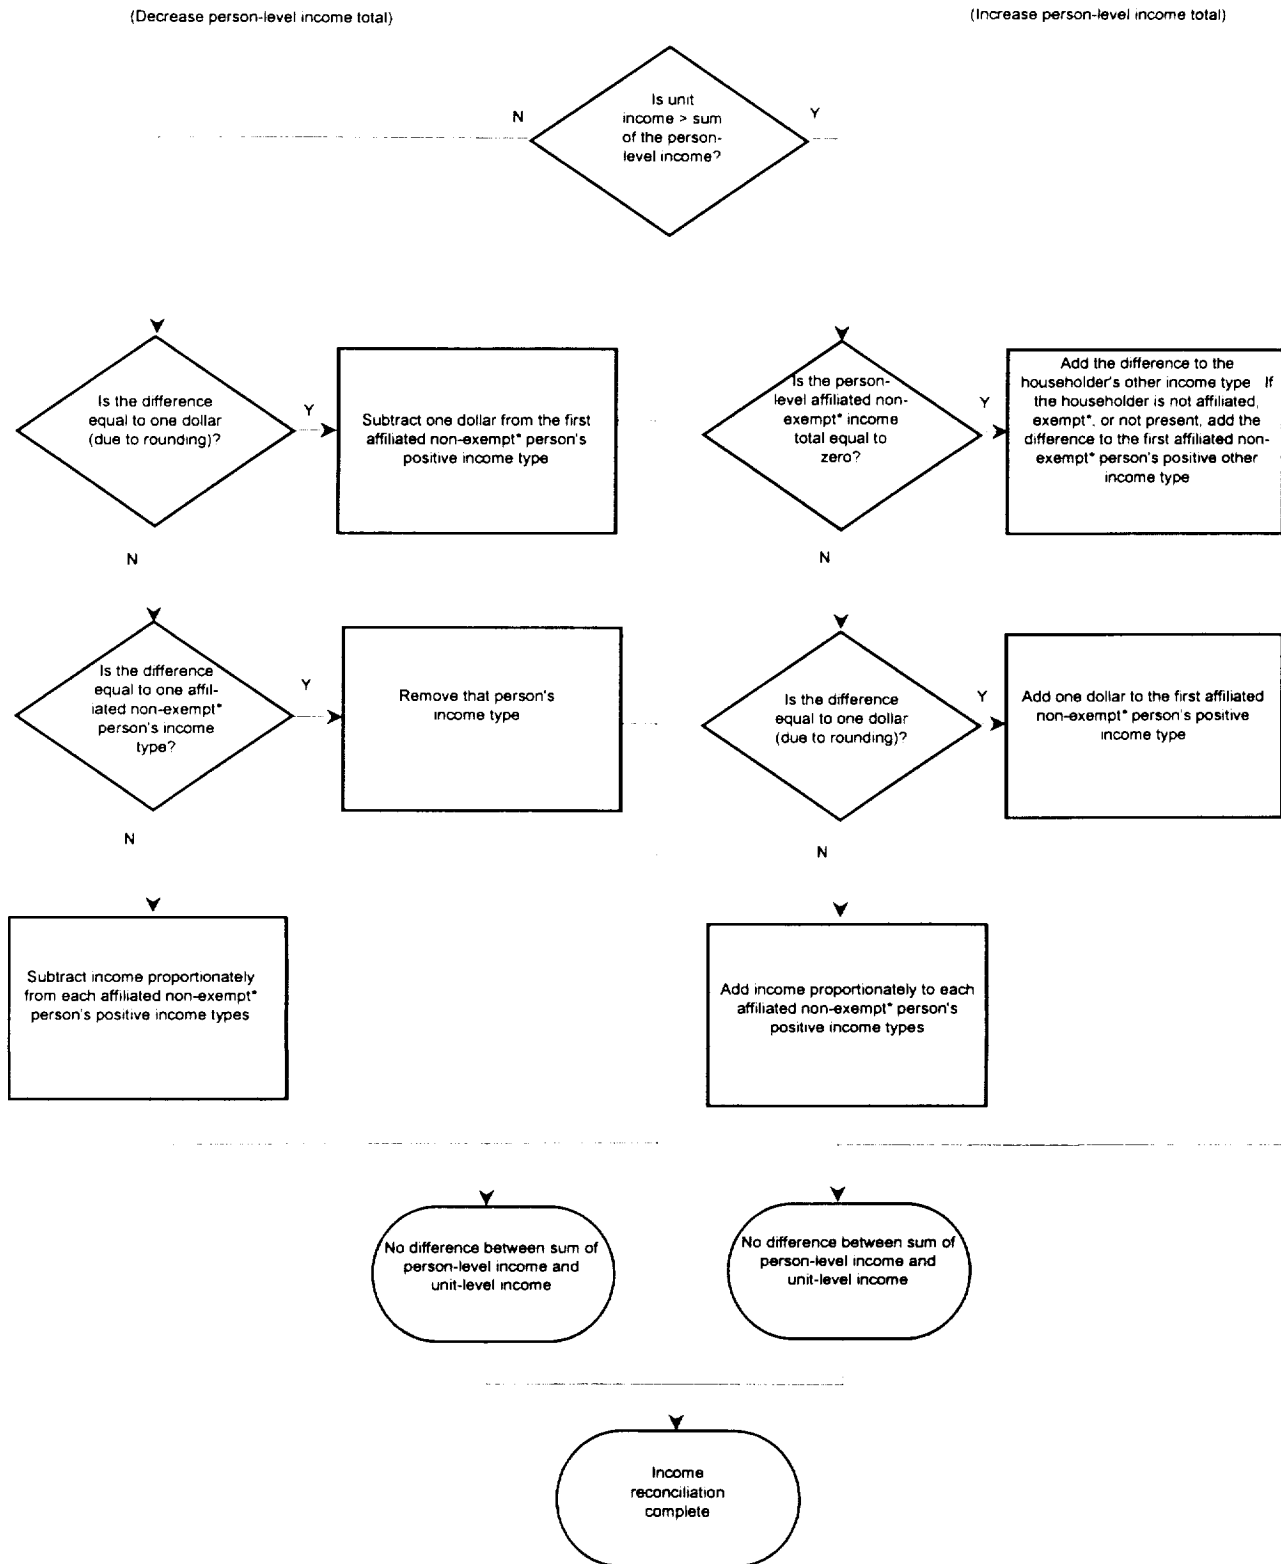

FIGURE IV 2 PERSON-LEVEL INCOME ADJUSTMENT ROUTINE

Adjust person-level earned and/or unearned income amounts  
to match final unit gross income

\* Exempt status is attributed to students under 18 years of age, and is applied to earned income amounts only. Earned income types for exempt persons are not included as part of unit income.

- (4) We then compare each scenario to the reported values of gross income, net income and benefits that are on the data file, to determine which scenario is most consistent with the reported values.

If the reported person-level total gross income (Series 2) is equal to reported unit gross income (Series 1), we use Series 2 values.

If the Series 1 net income and benefit values are both equal to their respective reported values, and either the Series 2 net income or the Series 2 benefit is equal to its respective reported values (but both do not match), we use Series 1 values.

If either the Series 1 net income or the Series 1 benefit is equal to the respective reported value, and neither the Series 2 net income nor the Series 2 benefit matches their respective reported values, we use Series 1 values.

If either the Series 1 net income or the Series 1 benefit is equal to the respective reported value, and both the Series 2 net income and benefit values match the corresponding reported values, we use Series 2 values.

If either the Series 1 net income or the Series 1 benefit is equal to the respective reported value, or if neither the Series 1 net income nor the Series 1 benefit is equal to the respective reported value, and either the Series 2 net income or the Series 2 benefit matches the corresponding reported value, then we use Series 2 values.

If none of the above conditions have been satisfied, we compare the reported benefit amount, adjusted for error, to the Series 1 and Series 2 benefit amounts. If the Series 2 benefit is equal to the reported benefit after adjustment, we use the Series 2 values; otherwise, if the Series 1 benefit is equal to the reported benefit amount after adjustment, we use the Series 1 values. If a series still has not been chosen, we choose the series that minimizes the following error measure:  $(\text{modeled benefit} - \text{reported benefit})^2 + (\text{modeled net income} - \text{reported net income})^2$ .

- (5) We reconcile person-level earnings with the chosen earned-income deduction if necessary. If no earnings are reported but the earned income deduction implies positive earnings, we add the difference to the householder's "other earned income"; if the householder is not affiliated, is exempt, or is not present in the unit, we add the difference to the first affiliated non-exempt person's "other earned income". If positive earnings are reported but do not match the earning value implied by the chosen earned income deduction, we proceed with the following adjustments: If the difference is one dollar (due to rounding), we adjust the first affiliated non-exempt person's positive earnings by a dollar. If the difference is greater than a dollar and is equal to one person's positive earnings amount, we remove that person's earnings amount. Otherwise we adjust each positive earnings value by a proportional amount, for each affiliated non-exempt person.
- (6) Person-level unearned income amounts are reconciled with the chosen gross income less earned income measure in the same manner as the person-level earned income amounts.
- (7) Lastly, we sum all person-level income amounts to obtain final unit-level income totals.

## V. DERIVATION OF SAMPLING WEIGHTS

The QC file contains three weight variables: (1) the original monthly weight (HWGT), (2) the corrected monthly weight (MTHWGT), and (3) the full-year weight (FYWGT). HWGT has been the standard weighting variable for the QC file in the past. However, to deal with certain problems in the data, both MTHWGT and FYWGT have been created over the last two years. MTHWGT should be used for all monthly tabulations, FYWGT for all full-year tabulations, and HWGT should not be used at all.

The tables in Appendix A show the original monthly weights (HWGT) and their derivation for each state and stratum. In states and months without a stratified sample, the weight for each FSP unit (column h) equals the caseload derived from program operations data (columns e and f) divided by the number of cases in the edited sample in that state and month (column g). In states and months with a stratified sample, weights for each stratum are calculated in the same manner as states without a stratified sample. First, though, each stratum's unedited caseload (column c) is adjusted proportionally so that the sum of the new strata's caseloads (column f) equals the state's *reported* caseload (column e). The weight for each FSP unit in each stratum (column h), then, equals the stratum's adjusted caseload (column f) divided by the number of cases in the edited sample in that stratum and month (column g).

The problem with the creation of HWGT is that the weight is undefined when the unedited sample size (column b) and stratum share (column d) are greater than zero, but the edited sample size (column g) is zero. This leads to the underestimation of Food Stamp Program operations data for that given state and month. In the 1996 IQCS data, this problem occurs with California in months 9602, 9605, and 9606 and Wisconsin in month 9608. To remedy this problem, a corrected monthly weight (MTHWGT) has been developed, which treats unedited sample size (column b) as zero, thus forcing

the stratum share (column d) to zero. Essentially, this allows cases from the other strata in a state to stand in for the missing stratum. When the user sums this corrected monthly weight over all cases in a specified month, the national caseload for that month is reproduced.

The third weight variable, FYWGT, was created in order to do full-year calculations on the data. This variable was created since not all states and strata have data for all months. In addition to the missing stratum for California and Wisconsin mentioned above, the Virgin Island's is missing data for the entire months of 9510 and 9511. FYWGT is created by summing up HWGT for the available months and then dividing by the number of months. Essentially, this allows cases from other months, but from the same state or stratum, to stand in for the missing state or stratum.

### **SECTION 3**

#### **THE QC-SPECIFIC PORTION OF THE QC MINIMODEL**

## **THE QC-SPECIFIC PORTION OF THE QC MINIMODEL**

The QC Minimodel uses a series of algorithms to simulate eligibility, benefits, and participation in the Food Stamp Program. Together, these algorithms comprise the Food Stamp Module (FSTAMP). Some of the algorithms in the FSTAMP module are specific to the input data source (CPS, SIPP, or QC), while others are database independent. This section documents the algorithms that are specific to the QC database. The database-independent algorithms are documented in the MATH SIPP Programmer's Guide, Technical Description and Codebook (Schechter, Sykes, Schmitt, 1997).

In addition, this section provides a technical description of the procedures used to transform data elements from the QC database into the data elements required as input to the database-independent algorithms of FSTAMP.

## VI. CREATE MATH-STYLE VERSION OF QC DATABASE

### A. INTRODUCTION

1. **Documented by:** John DiCarlo
2. **Coded by:** Mark Brinkley
3. **Specified by:** John DiCarlo
4. **Purpose**

The QC Minimodel requires a standard binary file in a particular format (MATH style) as input. This section describes the procedure used to create the binary file from the SAS version of the QC database.

### B. USER PARAMETERS

None.

### C. PROGRAMMER'S GUIDE

#### 1. HIPO Chart

None.

#### 2. Input files

QCFYxx.SD2	Final QC database file, in SAS format.
MATHPC.HDR	ASCII header file that describes the record layout of the database file, MATHPC.BIN

#### 3. Output files

MATHPC.HDR	ASCII header file that describes the record layout of the database file, MATHPC.BIN
MATHPC.BIN	QC database file in standard binary form, in a heirarchical format (household record then person records for persons in the household)

#### 4. Programs

MINIQCxx.SAS

## 5. Output Variables

The variables are the same as those in the QC data file in SAS format.

### D. TECHNICAL DESCRIPTION

The following is a brief description of the procedures used to create a MATH-style version of the QC database. For more detail, please refer to the MINIQCxx.SAS program.

Create a hierarchical file in standard binary format with one household record per record in the SAS dataset. Create one person record for each person in the FSP unit. Convert proprietary SAS missing data codes as follows:

```
.   -1      (blank on raw QC file)
.A  -2      (coded by MPR as out of range)
.B  -3      (coded by QC reviewer as unknown)
.C  -4      (unable to construct variable)
```

Edit by hand the MATHPC.HDR file so that its record layout matches the output statement in MINIQCxx.SAS.

## VII. QC-SPECIFIC PORTION OF THE QC MINIMODEL

### A. INTRODUCTION

1. **Documented by:** John DiCarlo
2. **Coded by:** John DiCarlo, Keith Rathbun
3. **Specified by:** John DiCarlo
4. **Purpose**

The QC Minimodel software is segregated into database-independent (generic) and database-specific components. The generic portions of the QC Minimodel are documented in the MATH-SIPP Programmer's Guide, Technical Description, and Codebook (Schechter, 1997). In this section, we document the QC-specific portion of the model.

### B. USER PARAMETERS

None of the user parameters are specific to the QC model. For a list of generic FSTAMP user parameters, see documentation for the database-independent portion of the FSP model (FSTAMP) in the MATH-SIPP Programmer's Guide, Technical Description, and Codebook (Schechter, 1997).

### C. PROGRAMMER'S GUIDE

#### 1. Input files

MATHPC.PRM user parameter file (text file)

MATHPC.HDR ASCII header file that describes the record layout of the database file, MATHPC.BIN

MATHPC.BIN QC database file in standard binary form, in a hierarchical format (household record then person records for persons in the household)

#### 3. Output files

MATHPC.HDR ASCII header file that describes the record layout of the database file, MATHPC.BIN

MATHPC.BIN QC database file in standard binary form, in a hierarchical format (household record then person records for persons in the household)

MATHPC.TAB summary tables

MATHPC.OUT debug file

## 4. Programs

### a. Subroutines

db_fs_counts	increments debug counters and prints totals to MATHPC.OUT file
db_fs_hh_definers	creates variables that do not vary by FSU
db_fs_display_partic_debug	dummy routine for comparability with SIPP version
db_fs_unit	identifies which household members belong to which food stamp unit and determines whether a person is categorically excluded from any FSU
db_fs_locate_vars	locates the database-specific input variables
db_fs_parm_array_sizes	sets the size of database-specific array sizes
db_fs_readparm	reads database-specific user parameters from parameter file
db_fs_validate_parm	validates the user parameters using database-specific criteria
db_fs_participation	determines whether or not eligible units participate
db_fs_display_debug	prints database-specific debug print about the FSP units and their eligibility determination
db_fs_vars	creates FSU summary variables (e.g., FSGRINC, FSNET)

### b. Modules

fs_dbdefine	common storage for database-specific household definer variables
fs_dblocs	common storage for database-specific variable locations

## 5. Output Variables

None. All output variables are created by the database-independent portion of the MATH FSTAMP model.

## D. TECHNICAL DESCRIPTION

### 1. Overview

The primary purpose of the QC-specific model algorithms is to use QC-specific data elements to construct the variables needed by the database-independent portion of FSTAMP. The most important QC-specific model algorithms are those in the db\_fs\_vars subroutine (found in DBVARS.F90). The specifications for these algorithms are found in sections 6 and 7 below.

### 2. Validate User Parameters

#### a. Purpose

Although there are no QC-specific user parameters for FSTAMP, some of the generic FSTAMP user parameters must have certain values for the QC model.

## b. Specification

The QC model does not support BASELAW = ''. The baselaw simulation is determined by the QC file editing process, *not* by FSTAMP (although the QC file editing algorithms match FSTAMP algorithms exactly). For new baselaws, use BASELAW = FS\_VARS in the NTH = 1 parameter set.

FS\_VARS = 1 is not allowed, because the variables with a suffix of "1" are always on the file. The original, suffix "1" variables are always needed by the DBVARS routine for imputing medical, shelter, and dependent care expenses, and countable assets (when the unit composition is not that of the original unit). If you change the suffix "1" set of variables on the file, make sure you understand the impact on the DBLOCS, DBDEFINE, and DBVARS calculations.

## 3. Locate the Input Variables Used and the Output Variables Created

### a. Purpose

During KEOF = 1, before processing household records, obtain pointers to variables needed as input to the database-specific model algorithms.

### b. Specification

Use the LOCVAR supervisor routine to obtain and store locations for the following variables:

STATE	AFDC	CONT	FSUN	1
10000000	00	000000	000000	1

Set U.S., Alaska, Hawaii, Guam & Virgin Islands geographic indicators. GEOG\_DED indexes the standard deduction, child care deduction, and shelter deduction arrays; GEOG\_SCRN indexes the gross & net income screen arrays; GEOG\_BEN indexes the maximum benefit array; and GEOG\_POV indexes the POVMONTH array.

```

SELECT CASE (STATE))
  CASE(15)                                !! HAWAII
    GEOG_DED = 3
    GEOG_SCRN = 3
    GEOG_BEN = 5
  CASE(2)                                !! ALASKA
    GEOG_DED = 2
    GEOG_SCRN = 2
    SELECT CASE (LOCALCOD)
      CASE(82)                            !! ALASKA RURAL I
        GEOG_BEN = 3
      CASE(44,46,47,51)                  !! ALASKA RURAL II
        GEOG_BEN = 4
      CASE DEFAULT
        GEOG_BEN = 2                    !! ALASKA URBAN is default
    END SELECT
  CASE(66)                                !! GUAM
    GEOG_DED = 4
    GEOG_SCRN = 1
    GEOG_BEN = 6
  CASE(78)                                !! VIRGIN ISLANDS
    GEOG_DED = 5
    GEOG_SCRN = 1
    GEOG_BEN = 7
  CASE DEFAULT
    GEOG_DED = 1
    GEOG_SCRN = 1
    GEOG_BEN = 1
END SELECT

GEOG_POV = GEOG_SCRN

```

Assign FSP reporting status

FS\_REPORTER - set to true for all households

There are six FSTAMP baselaw output variables that are not on the original QC database. If these six variables are not present on the input file, then set these variables as follows:

```

DO IP = 1, CTPRHH
  IPER(IP,L_FTSTUD (1)) = 0
  IPER(IP,L_CASHOT (1)) = 0
  IF (IPER(IP,L_FSUN (1)) .EQ. IP) THEN
    IPER(IP,L_FSASTEST (1)) = 1
    IPER(IP,L_FSGRTEST (1)) = 1
    IPER(IP,L_FSNETEST (1)) = 1
    IPER(IP,L_FSPART (1)) = 1
  ELSE
    IPER(IP,L_FSASTEST (1)) = 0
    IPER(IP,L_FSGRTEST (1)) = 0
    IPER(IP,L_FSNETEST (1)) = 0
    IPER(IP,L_FSPART (1)) = 0
  ENDIF
ENDDO

```

Obtain *original* QC values for imputation of shelter, medical, and dependent care expenses (FSSLTEXP, FSMEDEXP, FSDEDEXP) in cases where the FSU is not the original FSU. Note that

all of the calculations below *must* be based on the original FSU and its data, even if a new baselaw has been constructed. Also, set original assets, and total household AFDC (needed for the ALL\_PA determination in DBVARS routine).

```

ORIG_FSMEDEXP = IHHLD(L_FSMEDEXP)
ORIG_FSSLTEXP = IHHLD(L_FSSLTEXP)
ORIG_FSDEPEXP = IHHLD(L_FSDEPEXP)
ORIG_FSCSEXP  = IHHLD(L_FSCSEXP)

ORIG_FSUHEAD = 0
DO IP = 1, CTPRHH
  IF (IPER(IP,L_ORIG_FSUN) == IP) ORIG_FSUHEAD = IP
ENDDO
ORIG_FSUSIZE  = IPER(ORIG_FSUHEAD,L_ORIG_FSUSIZE )
ORIG_FSNKID   = IPER(ORIG_FSUHEAD,L_ORIG_FSNKID  )
ORIG_FSNELDER = IPER(ORIG_FSUHEAD,L_ORIG_FSNELDER)
ORIG_FSNDIS   = IPER(ORIG_FSUHEAD,L_ORIG_FSNDIS  )
ORIG_FSASSET  = IPER(ORIG_FSUHEAD,L_ORIG_FSASSET )

ORIG_KIDS_LT15 = 0
HHAFDC = 0
DO IP = 1, CTPRHH
  IF (IPER(IP,L_ORIG_FSUN) == 0) CYCLE
  IF (      IPER(IP,L_AGE) < 15
    & .AND. IPER(IP,L_AGE) >= 0 ) ORIG_KIDS_LT15 = ORIG_KIDS_LT15 + 1
ENDDO

```

## 5. Construct Food Stamp Unit

### a. Purpose

Use the "FSUN 1" code to construct the FSU. Make sure every FSU has a head.

### b. Specification

Assign FSUN (food stamp unit number) to each person in the household:

```

DO IP = 1, CTPRHH
  FSUN(IP) = IPER(IP,L_ORIG_FSUN)
  CASHOT(IP) = 0
ENDDO

```

Identify units that no longer have a head due to a reform - assign them a new head:

```

DO IP = 1,CTPRHH
  IF (FSUN(IP) .EQ. 0) CYCLE
  IF (FSUN(FSUN(IP)) /= FSUN(IP)) THEN
    DO JP = IP+1,CTPRHH
      IF (FSUN(JP) .EQ. FSUN(IP)) FSUN(JP) = IP
    ENDDO !JP LOOP
    FSUN(IP) = IP
  ENDIF
ENDDO !IP LOOP

```

## 6. Create FSU Summary Variables

### a. Purpose

Characteristics of the each food stamp unit must be summarized by adding the income of all members of the unit and counting various types of people in the unit (such as number of elderly and number children).

### b. Specification

Identify students whose earnings are not counted:

```
DO IP = 1, CTPRHH
  STUDENT(IP) = .FALSE.
  IF ( IPER(IP, L_AGE) <= STUDAGE(NTH) .AND. IPER(IP, L_AGE) >= 0 ) THEN
    SELECT CASE (IPER(IP, L_EMPRG))
      CASE (6,26,36,46)
        STUDENT(IP) = .TRUE.
    END SELECT
  ENDIF
END DO ! end of person loop
```

For each unit, aggregate the income of people in the FSU:

```
!----- WELFARE Support (Note: missing income values are coded as < 0)
IF (IPER(IP, L_AFDG) > 0) FSAFDC(IUNIT) = FSAFDC(IUNIT) + IPER(IP, L_AFDG)
IF (IPER(IP, L_SSI) > 0) FSSSI(IUNIT) = FSSSI(IUNIT) + IPER(IP, L_SSI)
IF (IPER(IP, L_GA) > 0) FSGA(IUNIT) = FSGA(IUNIT) + IPER(IP, L_GA)

!----- Earnings (Note: exclude student earnings from EARNINGS and GROSS income)
IF (.NOT. STUDENT(IP)) THEN
  IF (IPER(IP, L_WAGES) > 0) FSEARN(IUNIT) = FSEARN(IUNIT) + IPER(IP, L_WAGES)
  IF (IPER(IP, L_OTHERR) > 0) FSEARN(IUNIT) = FSEARN(IUNIT) + IPER(IP, L_OTHERR)
  IF (IPER(IP, L_SLFEMP) > 0) FSEARN(IUNIT) = FSEARN(IUNIT) + IPER(IP, L_SLFEMP)
ENDIF

!----- Other unearned income
IF (IPER(IP, L_OTHGOV) > 0) FSGRINC(IUNIT) = FSGRINC(IUNIT) + IPER(IP, L_OTHGOV)
IF (IPER(IP, L_SOCSEC) > 0) FSGRINC(IUNIT) = FSGRINC(IUNIT) + IPER(IP, L_SOCSEC)
IF (IPER(IP, L_UNEMP) > 0) FSGRINC(IUNIT) = FSGRINC(IUNIT) + IPER(IP, L_UNEMP)
IF (IPER(IP, L_VET) > 0) FSGRINC(IUNIT) = FSGRINC(IUNIT) + IPER(IP, L_VET)
IF (IPER(IP, L_WCOMP) > 0) FSGRINC(IUNIT) = FSGRINC(IUNIT) + IPER(IP, L_WCOMP)
IF (IPER(IP, L_EDLOAN) > 0) FSGRINC(IUNIT) = FSGRINC(IUNIT) + IPER(IP, L_EDLOAN)
IF (IPER(IP, L_CSUPRT) > 0) FSGRINC(IUNIT) = FSGRINC(IUNIT) + IPER(IP, L_CSUPRT)
IF (IPER(IP, L_DEEM) > 0) FSGRINC(IUNIT) = FSGRINC(IUNIT) + IPER(IP, L_DEEM)
IF (IPER(IP, L_CONT) > 0) FSGRINC(IUNIT) = FSGRINC(IUNIT) + IPER(IP, L_CONT)
IF (IPER(IP, L_OTHUN) > 0) FSGRINC(IUNIT) = FSGRINC(IUNIT) + IPER(IP, L_OTHUN)
```

For each unit, loop over persons in the unit and count the number of unit members with various characteristics:

```
FSUSIZE(IUNIT) = FSUSIZE(IUNIT) + 1

IF (IPER(IP, L_AGE) <= MAX_KID_AGE .AND. IPER(IP, L_AGE) >= 0) THEN
  FSNKID(IUNIT) = FSNKID(IUNIT) + 1
  IF (IPER(IP, L_AGE) >= MIN_SCHOOL_AGE) FSNK5T17(IUNIT) = FSNK5T17(IUNIT) + 1
  IF (IPER(IP, L_AGE) < 15) KIDS_LT15 = KIDS_LT15 + 1
  IF (IPER(IP, L_AGE) < MAX_TODDLER_AGE) THEN
    FNDEPLT2(IUNIT) = FNDEPLT2(IUNIT) + 1
  ELSE
    FNDEPGE2(IUNIT) = FNDEPGE2(IUNIT) + 1
  ENDIF
ENDIF
```

```

        END IF
    ELSE
        FSNADULT(IUNIT) = FSNADULT(IUNIT) + 1! Note: unknown age (AGE <0) counted here
    END IF

    IF (IPER(IP, L_AGE) >= MIN_ELDERLY_AGE ) FSNELDER(IUNIT) = FSNELDER(IUNIT) + 1

    if (iper(ip,l_dis) == 1) fsndis(iunit) = fsndis(iunit) + 1

```

For each unit, loop over persons in the unit and count persons with public assistance for use in the “pure PA” imputation. Do not consider persons with FSAFIL=11 as on AFDC unless someone in the household (regardless of FSAFIL) has AFDC income.

```

    if ( (      PUREPA(NTH) >= 1
      .AND. PUREPA(NTH) <= 3
      &      .AND. IPER(IP,L_FSAFIL) .EQ. 11
      &      .AND. HHAFDC          > 0
      &      )
    & .OR.(      PUREPA(NTH) >= 2
      .AND. PUREPA(NTH) <= 4
      &      .AND.( IPER(IP,L_SSI) > 0 .OR. IPER(IP,L_GA ) > 0)
      &      )
    & ) then
        IF (IPER(IP,L_AGE) >= 0 .AND. IPER(IP,L_AGE) <= MAX_KID_AGE) THEN
            KIDSPA = KIDSPA + 1
        ELSE
            ADULTSPA = ADULTSPA + 1
        ENDIF
    endif

```

For each unit, add earnings and welfare income to FSGRINC:

```

    FSGRINC(IUNIT) = FSGRINC(IUNIT) + FSEARN(IUNIT) + FSSSI(IUNIT)
    &                                + FSAFDC(IUNIT) + FSGA (IUNIT)

```

For each unit, impute “pure PA” status:

```

    IF ( (FSNADULT(IUNIT)>0 .AND. ADULTSPA == FSNADULT(IUNIT))
    &      .OR. KIDSPA == FSUSIZE(IUNIT) )      FSALLPA(IUNIT)=1

```

Identify FSUs headed by a single female. This is not used for any eligibility determination. It is used for summary counts only (G/L table). Note that persons with unknown age are NOT considered adults here, nor are they considered children.

```

    ADULTS = 0
    FEMADULTS= 0
    DO IP = 1, CTPRHH
        IF (FSUN(IP) /= IUNIT) CYCLE ! person not in the FSU
        IF (IPER(IP,L_AGE) >= 18 ) THEN ! no one with missing AGE here
            ADULTS = ADULTS + 1
            IF (IPER(IP,L_SEX) .EQ.2) FEMADULTS = FEMADULTS + 1
        ENDIF
    ENDDO
    IF (ADULTS == 1 .AND. FEMADULTS==1 .AND. FSNKID(IUNIT) >0) FSNGMOM(IUNIT) = 1

```

## 7. Impute Medical Expenses, Dependent Care Expenses, Shelter Expenses, and Assets When FSU Is Not the Original FSU

### a. Purpose

Asset and expense data recorded on the QC database pertain to the actual food stamp unit (FSU) sampled by the IQCS. However, the QC minimodel has the capability to simulate FSUs with compositions that are different from the composition of the original FSU. A minimodel simulation can form FSUs consisting of any group of persons in a QC household. While the QC system collects income data for each household member, asset and expense data are recorded only for the original FSU as a whole. Thus, the minimodel uses the original FSU's asset and expense data, along with the algorithms described below, to impute the asset and expense data for any simulated FSU that has a composition different from that of the original FSU. The minimodel does not use any of the algorithms described below when the composition of the simulated FSU is the same as the original FSU.

Many different imputation algorithms could be used to impute assets and expenses in simulations that involve changes to FSU composition. The best algorithm to use depends on the type of reform to be simulated. The algorithms described below have been incorporated into the minimodel because they have been used for numerous reform simulations requested by FCS during 1995. These algorithms will work well for many types of reforms, but they are not designed to be generally applicable.

### b. Specification

**Countable assets.** For all simulated FSUs, the minimodel assigns the countable assets of the original FSU:

$$FSASSET(IUNIT) = ORIG\_FSASSET$$

This algorithm is intended simply to keep all FSUs asset-eligible in the reform simulation. By keeping all FSUs asset-eligible, the model simulates the effect of a unit composition change solely via the change in income and FSU size that accompany a change in unit composition. This results in a simulation that uses information that is available (income of each unit, and number of persons in each unit), while holding constant the effect of information that is unknown (asset balances of each unit). In reality, changes in countable assets that result from changes in unit composition would cause some FSUs to lose eligibility. Minimodel results will not reflect eligibility losses that occur in this manner.

**Shelter expenses.** For all simulated FSUs, the minimodel assigns shelter expenses equal to the product of the number of persons in the unit and the per-capita shelter expenses of the original FSU:

$$FSSLTEXP(IUNIT) = ORIG\_FSSLTEXP * FSUSIZE(IUNIT) / ORIG\_FSUSIZE$$

This algorithm has been incorporated in the minimodel because it was used by FCS for many reform simulations during 1995.

In reality, a household's shelter expenses are assigned to each FSU in the household, based on the share of shelter expenses actually *paid* by each member of each FSU. Although the QC data contain no information regarding which persons are responsible for paying shelter expenses, one could impute payment responsibility based on income; a person with 65 percent of a household's income would be

assumed to be responsible for paying 65 percent of the household's shelter expenses. Again, the best imputation depends on the type of reform to be simulated.

**Medical expenses.** The minimodel imputes medical expenses based either on the number of elderly persons in the original unit, or, if no elderly are present, on the number of disabled persons. If the original unit contains no elderly persons and no disabled persons, then a medical deduction is not allowed, neither in the original QC file editing process, nor in any minimodel simulations.

```
IF (ORIG_FSMEDEXP > 0 ) THEN
  IF (ORIG_FSNELDER > 0) THEN
    FSMEDEXP(IUNIT) = ORIG_FSMEDEXP * FSNELDER(IUNIT) / ORIG_FSNELDER
  ELSE IF (ORIG_FSNDIS > 0) THEN
    FSMEDEXP(IUNIT) = ORIG_FSMEDEXP * FSNDIS(IUNIT) / ORIG_FSNDIS
  ELSE
    FSMEDEXP(IUNIT) = 0
  ENDIF
ENDIF
```

When both an elderly person and a non-elderly disabled person are present, note that the algorithm uses only the number of elderly persons, rather than both the number of elderly and the number of disabled persons. The implicit assumption is that, in any given household, it is likely that medical expenses are being generated by a single person, rather than multiple persons. If the medical expense are likely to be generated by a single person, the elderly person is more likely than the non-elderly disabled person to be generating the expenses; FY 1993 data show that only 2 percent of FSP households with non-elderly SSI recipients received a medical deduction, while 15 percent of elderly households received a medical deduction.

The medical expense imputation algorithm works best when persons are being removed from the original FSU, and when the original FSU is being split into two or more units. When persons not currently participating in the FSP (i.e. persons with FSAFIL 30-39) are being brought into the original FSU, the algorithm produces somewhat artificial results. In these latter cases, in reality, some FSUs without any medical expenses would bring in elderly persons who have medical expenses. Conversely, some FSUs with medical expenses would bring in elderly persons who do not have medical expenses. However, the minimodel algorithm only adds new medical expenses to a unit when medical expense already exist within the original unit. Conversely the minimodel algorithm never adds any new medical expenses to any units that did not already exist within the original unit.

For the FY 1995 QC minimodel, the following distribution shows the percentage of households for which each algorithm would be used if all units were simulated to have a change in composition:

No medical expenses reported:	95.18%
Medical expenses imputed using number of elderly:	3.55%
Medical expenses imputed using number of disabled:	1.11%
Medical expenses not used - no elderly, no disabled:	0.15%

**Dependent care expenses.** The minimodel imputes dependent care expenses to simulated FSUs using a hierarchy of alternative algorithms. In most cases, dependent care expenses are assigned based on the number of children under age 15 in the FSU.

```
IF (ORIG_FSDEPEXP > 0) THEN
```

```

IF (ORIG_KIDS_LT15 > 0) THEN
  FSDEPEXP(IUNIT) = (ORIG_FSDEPEXP * KIDS_LT15) / ORIG_KIDS_LT15
ELSE IF (ORIG_FSNKID > 0) THEN
  FSDEPEXP(IUNIT) = (ORIG_FSDEPEXP * FSNKID(IUNIT)) / ORIG_FSNKID
ELSE IF (ORIG_FSNDIS > 0 .or. ORIG_FSNELDER > 0) THEN
  FSDEPEXP(IUNIT) = ORIG_FSDEPEXP
  & * ( FSNDIS(IUNIT) + FSNELDER(IUNIT) )
  & / ( ORIG_FSNDIS + ORIG_FSNELDER )
ELSE IF (.NOT. DEPEXP_LAST_RESORT) THEN
  FSDEPEXP(IUNIT) = ORIG_FSDEPEXP
  DEPEXP_LAST_RESORT = .TRUE.
ENDIF
ENDIF

```

For the FY 1995 QC minimodel, the following distribution shows the percentage of households for which each algorithm would be used if all units were simulated to have a change in composition:

No dependent care expenses reported:	96.62%
Dependent care expenses imputed using # of kids under age 15:	3.28%
Dependent care expenses imputed using # of kids age 15-17:	0.01%
Dependent care expenses imputed using # of elderly & disabled:	0.08%
Dependent care expenses imputed to the first FSU in the household:	0.01%

**Child support payment expenses.** The QC model imputes the child support payment expenses of the original unit to the head of the original unit. The child support deduction is equal to the child support expenses.

```

if (orig_fscsexp > 0.and.fsun(orig_fsuhead) == iunit) fscspded(iunit) = orig_fscsexp

```

For any reform plan, the child support expenses are assigned to whichever simulated FSP unit contains the head of the original unit. If the head of the original unit does not belong to any of the reform units, then the child support expenses are not used.

## 8. Select Participants

### a. Purpose

After eligibility is determined for an FSU in the household, the model must simulate whether or not the FSU decides to participate. For the QC version of the model, all eligible units are selected to participate. Because every household on the file did in reality participate in the FSP, the all-eligible-units-participate model is reasonable in most cases. If a large reduction in FSP benefits is simulated, the user may want to model some eligible households to decide *not* to participate.

### b. Specification

```

DO IUNIT = 1, CTPRHH
  FSPART(IUNIT) = 0
  IF (FSUN(IUNIT) /= IUNIT) CYCLE ! not the FSU head, so skip to next person
  IF (FSBEN(IUNIT) > 0) FSPART(IUNIT) = 1 ! All eligible units participate
END DO

```

## **SECTION 4**

## **CODEBOOK**

## VIII. DESCRIPTION OF VARIABLES ON THE QUALITY CONTROL FILE

In this chapter, we describe the variables on the Fiscal Year 1996 QC file. The codebook lists each variable name and provides a description of each variable. Appendix B contains FY 1996 FSP program parameters, Appendix C contains state and region codes, and Appendix D contains the Integrated Review Schedule input form.

### A. REPORTED VARIABLES

The "Origin" column in this documentation indicates the source of each particular variable as either reported or constructed. Variables coded "R" are those reported on the Integrated Review Schedule input form (Appendix D) and have been read directly from the IQCS extract, although some editing may have taken place as noted in the variable description.

### B. CONSTRUCTED VARIABLES

Variables coded "C" are constructed or recoded variables that are derived from reported variables and program parameters (such as the Thrifty Food Plan and the FSP benefit reduction rate). In some cases, reported variables exist for similar concepts, such as gross and net income. Constructed variables represent the best variables for analytical purposes because inconsistencies have been corrected.

The following variables are used in creating the tables in the "*Characteristics of Food Stamp Households: 1996*" report series and should be used to obtain consistent results:

Unit food stamp benefit amount	--	use FSBEN
Unit size	--	use FSUSIZE
Unit total income	--	use FSGRINC

Unit net income	--	use FSNETINC
Unit earnings deduction	--	use FSERNDDED
Unit poverty percentage	--	use TPOV

### **C. MISSING VALUES**

Missing value codes have been used to indicate various situations as follows:

- . - Blank on source file
- .A - Value out of range
- .B - Coded by QC reviewer as unknown (reviewer coded the field with all 9s)
- .C - Pertains to constructed variables only; means that variable could not be constructed or calculated due to missing data

The above codes are stored in the SAS file to represent missing values. Non-SAS files will have the following codes:

- 1 - Blank on source file
- 2 - Value out of range
- 3 - Coded by QC reviewer as unknown (reviewer coded the field with all 9s)
- 4 - Pertains to constructed variables only; means that variable could not be constructed or calculated due to missing data

### **D. USING THE DATA FILE**

The Fiscal Year 1996 Food Stamp QC database is a SAS file with 50,883 observations from 12 sample months--October 1995 to September 1996 for most states. Due to reporting problems, all 12 months are not available for the Virgin Islands (STATE=78). The user has the flexibility to choose all 12 months, one month, or a set of months to conduct analyses. To conduct analyses for a specific calendar month, the user should select observations sampled in that month by using the year month (YRMONTH) variable. The year month variable is a four digit code with the first two digits indicating

the year and the last two digits indicating the month. For example, if the user desires to conduct analysis based on observations from January 1996, all observations with a YRMONTH code equal to "9601" should be selected. If the user does not specify a subset of observations based on YRMONTH, all months will be included in the analysis.

After the desired observations are selected, the observations must be weighted so that the sample represents the national food stamp caseload. To weight the sample, the user must assign a weight to each observation. The weights, which are based on actual program participation, are computed for each of the 12 independent monthly samples and are stored in the variable MTHWGT. (For a description of the sampling weight, see section 2). When analyzing one specific calendar month, the user should use the YRMONTH code to select the correct observation and the use MTHWGT fields unaltered. However, if the analysis is based on more than one month, and an average monthly estimate is desired, the user should select the observation and divide the weight by the number of months being analyzed. MTHWGT should be used for all monthly tabulations and FYWGT for all full-year tabulations.

To use the QC database to obtain information on persons receiving food stamps, rather than unit-level data, the user must array the FSP affiliation code (FSAFIL1-FSAFIL15). When an array member has a value between 10 and 20, that person participated in the FSP.

The Fiscal Year 1996 Food Stamp QC database is used to produce the report entitled "*Characteristics of Food Stamp Households: 1996*" (expected release date is spring 1998). The summary tables which appear in the report are based on the full-year sample--October 1995 through September 1996. To produce these characteristics, we selected all observations for all months and weighted the observations by FYWGT to reflect the national monthly average caseload during the Fiscal Year 1996.

## **IX. CODEBOOK**

This codebook lists and describes each variable in the FY 1996 QC file. The unit-level variables are listed first, followed by the person-level variables. The unit-level variables are divided into the following 6 categories:

- (1) Unit QC review administrative data
- (2) Unit demographics and sample weights
- (3) Unit income
- (4) Unit assets
- (5) Unit expenses and deductions
- (6) Unit benefits

The person-level variables are divided into 2 categories:

- (7) Person-level characteristics
- (8) Person-level income

The categories appear in the order shown above. The variables in each category are listed alphabetically. Two codebooks are presented, both sorted in the exact same order. The first codebook--the quick-reference codebook--lists only the variable name, its origin, and a brief description, while the second codebook--the detailed codebook--lists the variable name, its origin, and a detailed description that includes all the valid values of the variable.

#### Unit QC Review Administrative Data

ACTNTYPE	R	Type of action
AUTHREP	R	Authorized representative
CASE	R	Case classification
CERTMTH	R	Months in certification period
EXPEDSER	R	Received expedited service
HHLDNA	C	Household identification number
LASTCERT	C	Months since last certification for food stamps
LOCALCOD	R	Local agency code
PRIOR	R	Received prior assistance
RCNTACTN	R	Most recent action on case
RCNTOPEN	R	Most recent opening/application
REVNUM	R	QC review number
REVTYPE	R	Type of review
STATUS	R	Status of case error findings
YRMONTH	R	Sample year and month

#### Unit Demographics and Sample Weights

CERTHHSZ	R	Certified unit size
CTPRHH	C	Number of non-missing persons in household
FSALLPA	C	Pure public assistance unit
FSNDIS	C	Disabled: number of persons
FSNELDER	C	Number of persons $\geq 60$ years old in unit
FSNGMOM	C	Single-female headed unit
FSNK0T4	C	Number of preschool-age children (<5 years) in unit
FSNK5T17	C	Number of children (5 to 17 years old) in unit
FSNKID	C	Number of children <18 years old in unit
FSUSIZE	C	Constructed certified unit size
FYWGT	C	Weight used for full-year calculations
HWGT	C	Original unit monthly sample weight
MTHWGT	C	Corrected monthly sample weight (to match program data)
RAWHSIZE	R	Reported number of persons in unit
REGION	C	Constructed census region code
REGIONCD	R	FCS region code
STATE	R	FIPS code for state or territory
COUNTYCD	C	FIPS code for county
STRATUM	R	Stratum identification
TPOV	C	Gross income/poverty level ratio
URBRUR	C	Urban/rural indicator

<u>VARIABLE</u>	<u>ORIGIN</u>	<u>DESCRIPTION</u>	<i>Quick-Reference Codebook</i>
-----------------	---------------	--------------------	---------------------------------

**Unit Income (Monthly Dollar Amounts)**

FSAFDC	C	Unit AFDC payments
FSCONT	C	Unit income from contributions
FSCSUPRT	C	Unit child support enforcement payments
FSDEEM	C	Unit deemed income
FSEARN	C	Unit earned income
FSEDLOAN	C	Unit educational grants and school loans
FSEITC	C	Unit earned income tax credit
FSGA	C	Unit general assistance
FSGRINC	C	Final unit gross income
FSNETINC	C	Final net income
FSOTHERN	C	Unit other earned income
FSOTHGOV	C	Unit other government benefits
FSOTHUN	C	Unit other unearned income
FSSLFEMP	C	Unit self employment
FSSOCSEC	C	Unit social security income
FSSSI	C	Unit SSI benefits
FSUNEMP	C	Unit unemployment compensation
FSVET	C	Unit veterans' benefits
FSWAGES	C	Unit wage and salary
FSWCOMP	C	Unit workers' compensation
RAWGROSS	R	Reported unit gross income
RAWNET	R	Reported net income

**Unit Assets**

FSASSET	C	Total countable assets
FSVEHAST	R	Non-excluded vehicles value
LIQRESOR	R	Reported liquid assets
OTHNLRES	R	Reported other nonliquid assets
REALPROP	R	Reported real property

**Unit Expenses and Deductions**

FSCSEXP	R	Reported child support expense deduction
FSDEPDED	C	Corrected dependent care deduction
FSDEPDE2	C	Marginal effectiveness for dependent care deduction
FSDEPEXP	R	Reported dependent care expenses
FSERNDED	C	Calculated earned income deduction
FSERNDE2	C	Marginal effectiveness for earned income deduction
FSMEDDED	C	Calculated medical deduction
FSMEDDE2	C	Marginal effectiveness for medical deduction
FSMEDEXP	R	Reported medical expenses
FSSLTDED	C	Calculated excess shelter deduction

<b><u>VARIABLE</u></b>	<b><u>ORIGIN</u></b>	<b><u>DESCRIPTION</u></b>	<i>Quick-Reference Codebook</i>
FSSLTDE2	C	Marginal effectiveness for excess shelter deduction	
FSSLTEXP	R	Reported shelter expenses	
FSSTDDED	C	Standard deduction	
FSSTDDE2	C	Marginal effectiveness for standard deduction	
FSTOTDED	C	Total deductions	
FSTOTDE2	C	Marginal effectiveness for total deduction	
RAWERND	R	Reported earned income deduction	
SHELCAP	C	Maximum allowable shelter expense deduction	

### **Unit Benefits**

AMTERR	R	Amount of coupon allotment in error
BENMAX	C	Maximum benefit amount
FSBEN	C	Final calculated benefit
FSMINBEN	C	Received minimum benefit
NETSCRN	C	Net income screen
RAWBEN	R	Reported food stamp benefit received

### **Person-Level Characteristics**

AGEi	R	Age
CTZNi	R	Citizenship status
DISi	C	Disabled indicator
EMPRGi	R	Employment work registration status
EMPSTi	R	Employment status
FSAFiLi	R	Food stamp case affiliation
FSUNi	C	Position of head of food stamp unit
RACETHi	R	Race/ethnicity
RELi	R	Relationship to head of household
SEXi	R	Sex
YRSEDi	R	Years of education

### **Person-Level Income (Monthly Dollar Amounts)**

AFDCi	R	AFDC payment
CONTi	R	Contribution per person
CSUPRTi	R	Support payments made to child support agency
DEEMi	R	Deemed income
EDLOANi	R	Educational loan income
EITCi	R	Earned income tax credit
GAi	R	General assistance benefit level
OTHERNi	R	Other earned income
OTHGOVi	R	Other government benefits
OTHUNi	R	Other unearned income
SLFEMPi	R	Self employment earnings
SOCSECi	R	Social security income

<u>VARIABLE</u>	<u>ORIGIN</u>	<u>DESCRIPTION</u>	<i>Quick-Reference Codebook</i>
SSI <sub>i</sub>	R	Supplemental security income	
UNEMP <sub>i</sub>	R	Unemployment compensation	
VET <sub>i</sub>	R	Veterans' benefit income	
WAGES <sub>i</sub>	R	Wages and salaries	
WCOMP <sub>i</sub>	R	Workers' compensation benefits	

**VARIABLE      ORIGIN      DESCRIPTION**

**Unit QC Review Administrative Data**

ACTNTYPE	R	<p>TYPE OF ACTION: Range = (1, 4) 1=Initial approval or certification 2=Reopened case after discontinuance action (AFDC only) 3=Redetermination or recertification 4=Monthly report (AFDC only)</p>
AUTHREP	R	<p>AUTHORIZED REPRESENTATIVE: Range = (1, 2) 1=Used to make application 2=Not used to make application</p>
CASE	R	<p>CASE CLASSIFICATION: Range = (1, 3) 1=Processed by an Eligibility Worker (EW) in a State or county certification office or by an EW outstationed in a Social Security Administration (SSA) office. 2=Processed by an SSA worker. 3=Part of an authorized demonstration project that has been identified by FCS as having significantly different certification rules.</p>
CERTMTH	R	<p>MONTHS IN CERTIFICATION PERIOD: Range = (0, 97) Months case was certified to participate during the initial certification or recertification.</p>
EXPEDSER	R	<p>RECEIVED EXPEDITED SERVICE: Range = (1, 2) 1=Yes 2=No</p>
HHLDNA	C	<p>HOUSEHOLD IDENTIFICATION NUMBER: Range = (2, 57643) For purposes of file editing and review, this is a unique unit identifier; HHLDNA is the record position of the unit in the unedited IQCS file.</p>
LASTCERT	C	<p>MONTHS SINCE LAST CERTIFICATION FOR FOOD STAMPS Range = (0, 96)</p>

*Detailed Codebook*  
*Unit QC Review*

<u>VARIABLE</u>	<u>ORIGIN</u>	<u>DESCRIPTION</u>
-----------------	---------------	--------------------

LOCALCOD	R	LOCAL AGENCY CODE: Range = (0, 953) A code allowing grouping of data by county or county equivalent. May be FIPS code or an alternative classification
----------	---	---

<u>VARIABLE</u>	<u>ORIGIN</u>	<u>DESCRIPTION</u>
YRMONTH	R	<p>SAMPLE YEAR AND MONTH: Range = (9510, 9609)</p> <p>The YRMONTH variable allows the user to select one or more sample months from the full-year file for analyses. The YRMONTH variable is a four digit code; the first two digits indicate the sample year and the last two indicate the month. To select observations from the month of January 1996, for example, YRMONTH should equal "9601".</p>

<u>VARIABLE</u>	<u>ORIGIN</u>	<u>DESCRIPTION</u>	<i>Detailed Codebook Unit Demographics/Weights</i>
-----------------	---------------	--------------------	--

**Unit Demographics and Sample Weights**

CERTHHSZ	R	CERTIFIED UNIT SIZE Range = (1, 95)
CTPRHH	C	NUMBER OF NON-MISSING PERSONS IN HOUSEHOLD: Range = (1, 15) Set equal to the number of persons in the household with any non-missing person-level information.
FSALLPA	C	PURE PUBLIC ASSISTANCE UNIT: Range = (0, 1) 1=Yes 0=No (Public Assistance includes AFDC, GA and SSI, and every member of the food stamp unit must receive some type of public assistance to be considered a pure PA UNIT. Receipt of AFDC is determined using FSAFIL=11 and FSAFDC>0.)
FSNDIS	C	DISABLED: NUMBER OF PERSONS IN UNIT THAT MEET THE FOLLOWING CRITERIA: Range = (0, 5) If AGE>=0 and AGE<=17 and SSI>0 or AGE>=18 and AGE<=61 and SSI>0 or AGE>=18 and AGE<=61 and SSI^>0 and SOCSEC>0 and FSNKID=0 or AGE>=18 and AGE<=61 and SSI^>0 and SOCSEC>0 and FSNKID>0 and EMPRG=1 or AGE>=18 and AGE<=61 and SSI^>0 and SOCSEC^>0 and (VET>0 or OTHGOV>0) and EMPRG=1 or AGE>=62 and AGE<=64 and SSI>0
FSNELDER	C	NUMBER OF PERSONS AGE≥60 IN UNIT Range = (0, 4)
FSNGMOM	C	SINGLE-FEMALE HEADED UNIT: Range = (0, 1) 1= Yes (One adult female age 18 to 98 plus one or more children in unit) 0= No
FSNK0T4	C	NUMBER OF PRESCHOOL-AGE CHILDREN (<5 YEARS) IN UNIT Range = (0, 5)

<b><u>VARIABLE</u></b>	<b><u>ORIGIN</u></b>	<b><u>DESCRIPTION</u></b>	<b><i>Detailed Codebook Unit Demographics/Weights</i></b>
FSNK5T17	C	NUMBER OF CHILDREN (5 TO 17 YEARS OLD) IN UNIT Range = (0, 12)	
FSNKID	C	NUMBER OF CHILDREN <18 YEARS OLD IN UNIT Range = (0, 13)	
FSUSIZE	C	CONSTRUCTED CERTIFIED UNIT SIZE: Range = (1, 15) Set equal to the number of people in the dwelling with FSAFILi between 10 and 20 (member of food stamp unit under review).	
FYWGT	C	WEIGHT USED FOR FULL-YEAR CALCULATIONS: Range = (16.4283333, 6865.66) Calculated as HWGT/10 if STATE=78, as HWGT/9 if STATE=6 AND STRATUM=3, as HWGT/11 if STATE=55 AND STRATUM=14, otherwise equals HWGT/12.	
HWGT	C	ORIGINAL UNIT MONTHLY SAMPLE WEIGHT: Range = (197.14, 61790.93) Do not use this variable. This field contains sample weights which have not been modified to account for stratum sizes which drop to zero. Using this variable results in monthly counts that differ from Food Stamp Program Operations data. MTHWGT should be used in order to match monthly counts with Program Operations data.	
MTHWGT	C	CORRECTED MONTHLY SAMPLE WEIGHT: Range = (197.14, 61790.93) This field contains sample weights that allow the user to replicate total <i>monthly</i> caseloads as reflected in Food Stamp Program Operations data. If the reference period of analysis is longer than one calendar month, in order to get an average monthly value for that reference period, the weight field must be divided by the number of months being analyzed. This field is different from HWGT in that MTHWGT has been adjusted to account for stratum sizes which are allocated a share of the state weight, but the share is unable to be used since the sample size falls to zero after the editing process.	
RAWHSIZE	R	REPORTED NUMBER OF PERSONS IN HOUSEHOLD Range = (1, 16)	

<b><u>VARIABLE</u></b>	<b><u>ORIGIN</u></b>	<b><u>DESCRIPTION</u></b>	<b><i>Detailed Codebook Unit Demographics/Weights</i></b>
REGION	C	CONSTRUCTED CENSUS REGION CODE: Range = (1, 4) 1=Northeast 2=Midwest 3=South 4=West	
REGIONCD	R	FCS REGION CODE: Range = (1, 7) 1=Northeast 2=Mid-Atlantic 3=Southeast 4=Midwest 5=Southwest 6=Mountain Plains 7=Western See appendix C for States by region.	
STATE	R	FIPS CODE FOR STATE OR TERRITORY: Range = (1, 78) See appendix C for FIPS code list.	
COUNTYCD	C	FIPS CODE FOR COUNTY Range = (1, 810)	
STRATUM	R	STRATUM IDENTIFICATION: Range = (0, 42) Codes for distinct parts of States with stratified samples (see Appendix A). Blank stratum codes have been recoded to zero and STRATUM codes for Texas have been recoded from character to numeric values.	
TPOV	C	GROSS INCOME/POVERTY LEVEL RATIO: Range = (0, 926) Calculated as (FSGRINC/NETSCRN)*100, rounded.	
URBRUR	C	URBAN/RURAL INDICATOR: Range = (0, 3) 0=Rural 1=Urban 3=Unknown	

**VARIABLE      ORIGIN      DESCRIPTION**

**Unit Income (Monthly Dollar Amounts)**

FSAFDC	C	UNIT AFDC PAYMENTS: Range = (0, 1943) Sum of AFDC1 through AFDC15
FSCONT	C	UNIT INCOME FROM CONTRIBUTIONS: Range = (0, 1590) Sum of CONT1 through CONT15
FSCSUPRT	C	UNIT SUPPORT PAYMENTS MADE TO CHILD SUPPORT AGENCY: Range = (0, 1408) Sum of CSUPRT1 through CSUPRT15
FSDEEM	C	UNIT DEEMED INCOME: Range = (0, 564) Sum of DEEM1 through DEEM15
FSEARN	C	UNIT EARNED INCOME: Range = (0, 2995) Sum of FSWAGES, FSSLFEMP, and FSOTHERN
FSEDLOAN	C	UNIT EDUCATIONAL GRANTS AND SCHOOL LOANS: Range = 0, 712) Sum of EDLOAN1 through EDLOAN15
FSEITC	C	UNIT EARNED INCOME TAX CREDIT: Range = (0, 1250) Sum of EITC1 through EITC15
FSGA	C	UNIT GENERAL ASSISTANCE: Range = (0, 1401) Sum of GA1 through GA15
FSGRINC	C	FINAL GROSS INCOME: Range = (0,7743) Set equal to the reported gross income, or the person-level total gross income depending on which one was determined to be correct. (See chapter IV for a full explanation of how consistency was achieved).

<u>VARIABLE</u>	<u>ORIGIN</u>	<u>DESCRIPTION</u>	<i>Detailed Codebook Unit Income</i>
FSNETINC	C	FINAL NET INCOME: Range = (0, 7609) Total monthly income of unit in dollars, after applying deductions. Calculated as: FSNETINC=MAX(0, FSGRINC-FSTOTDED).	
FSOTHERN	C	UNIT OTHER EARNED INCOME: Range = (0, 1635) Sum of OTHERN1 through OTHERN15	
FSOTHGOV	C	UNIT OTHER GOVERNMENT BENEFITS: Range = (0, 1402) Sum of OTHGOV1 through OTHGOV15	
FSOTHUN	C	UNIT OTHER UNEARNED INCOME: Range = 0, 1545) Sum of OTHUN1 through OTHUN15	
FSSLFEMP	C	UNIT SELF EMPLOYMENT: Range = (0, 2180) Sum of SLFEMP1 through SLFEMP15	
FSSOCSEC	C	UNIT SOCIAL SECURITY INCOME: Range = (0, 1644) Sum of SOCSEC1 through SOCSEC15	
FSSSI	C	UNIT SSI BENEFITS: Range = (0, 7743) Sum of SSI1 through SSI15	
FSUNEMP	C	UNIT UNEMPLOYMENT COMPENSATION: Range = (0, 1534) Sum of UNEMP1 through UNEMP15	
FSVET	C	UNIT VETERANS' BENEFITS: Range = (0, 1441) Sum of VET1 through VET15	
FSWAGES	C	UNIT WAGE AND SALARY: Range = (0, 2995) Sum of WAGES1 through WAGES15	
FSWCOMP	C	UNIT WORKERS' COMPENSATION: Range = (0, 1819) Sum of WCOMP1 through WCOMP15	

<u>VARIABLE</u>	<u>ORIGIN</u>	<u>DESCRIPTION</u>	<i>Detailed Codebook Unit Income</i>
RAWGROSS	R	REPORTED GROSS INCOME: Range = (0, 9738) Reported total monthly income of unit in dollars, before applying deductions.	
RAWNET	R	REPORTED NET INCOME: Range = (0,7605) Reported net income of unit in dollars.	

<u>VARIABLE</u>	<u>ORIGIN</u>	<u>DESCRIPTION</u>	<i>Detailed Codebook Unit Assets</i>
<b>Unit Assets</b>			
FSASSET	C	TOTAL COUNTABLE ASSETS: Range = (0, 7261) Sum of LIQRESOR, FSVEHAST, OTHNLRES and REALPROP; if any one of these contain a missing value, FSASSET will be missing.	
LIQRESOR	R	REPORTED LIQUID ASSETS Range = (0, 7261)	
FSVEHAST	R	NON-EXCLUDED VEHICLES VALUE Range = (0, 6000)	
OTHNLRES	R	REPORTED OTHER NONLIQUID ASSETS Range = (0, 3500)	
REALPROP	R	REPORTED REAL PROPERTY: Range = (0, 2775) Does not include home.	

<u>VARIABLE</u>	<u>ORIGIN</u>	<u>DESCRIPTION</u>	<i>Detailed Codebook Unit Expenses and Deductions</i>
-----------------	---------------	--------------------	---

**Units Expenses and Deductions**

FSCSEXP	R	REPORTED CHILD SUPPORT EXPENSE DEDUCTION: Range = (0, 414) This variable is new for 1996 and allows those paying child support to deduct the amount before the food stamp benefit amount is calculated.
FSDEPDED	C	CORRECTED DEPENDENT CARE DEDUCTION: Range = (0, 700) Calculated as: $FSDEPDED = \text{MIN}(FSDEPEXP, (200 * NK0T1) + (175 * NK2T17))$ if $FSNKID > 0$ , $FSDEPDED = \text{MIN}(FSDEPEXP, 175)$ if $FSNKID = 0$ , where $FSDEPEXP$ is dependent care expense, and $NK0T1$ is the number of children AGE 0 to 1 and $NK2T17$ is the number of children AGE 2 to 17.
FSDEPDE2	C	MARGINAL EFFECTIVENESS FOR DEPENDENT CARE DEDUCTION: Range = (0, 915) Calculated as: $\text{MAX}(0, FSGRINC - FSSLT3 - FSERNDED - FSMEDDED - FSSTDDED - FSCSEXP) - FSNETINC$ , where $FSSLT3$ is the standard shelter deduction less $FSDEPDED$ .
FSDEPEXP	R	REPORTED DEPENDENT CARE EXPENSES Range = (0, 726)
FSERNDED	C	CALCULATED EARNED INCOME DEDUCTION: Range = (0, 599) Calculated as: $FSERNDED = .20 * FSEARN$ , rounded to nearest integer.
FSERNDE2	C	MARGINAL EFFECTIVENESS FOR EARNED INCOME DEDUCTION: Range = (0, 612) Calculated as: $\text{MAX}(0, FSGRINC - FSSLT2 - FSDEPDED - FSMEDDED - FSSTDDED - FSCSEXP) - FSNETINC$ , where $FSSLT2$ is the standard shelter deduction less $FSERNDED$ .

<b><u>VARIABLE</u></b>	<b><u>ORIGIN</u></b>	<b><u>DESCRIPTION</u></b>	<i>Detailed Codebook Unit Expenses and Deductions</i>
FSMEDDED	C	CALCULATED MEDICAL DEDUCTION: Range = (0,963) For units with elderly or disabled members only, the deduction equals expenses over \$35. Calculated as: $FSMEDDED = \text{MAX}(0, FSMEDEXP - 35)$ .	
FSMEDDE2	C	MARGINAL EFFECTIVENESS FOR MEDICAL CARE DEDUCTION: Range = (0, 967) Calculated as: $\text{MAX}(0, FSGRINC - FSSLT4 - FSDEPDED - FSERNDED - FSSTDDED - FSCSEXP) - FSNETINC$ , where FSSLT4 is the standard shelter deduction less FSMEDDED.	
FSMEDEXP	R	REPORTED MEDICAL EXPENSES Range = (0, 998)	
FSSLTDED	C	CALCULATED EXCESS SHELTER DEDUCTION: Range = (0, 831) Calculated as: $FSSLTDED = \text{XCOST}$ , if elderly or disabled, else $FSSLTDED = \text{MIN}(\text{XCOST}, \text{SHELCAP})$ where $\text{XCOST} = \text{MAX}(0, FSSLTEXP - \text{HALFNET})$ , $\text{HALFNET} = \text{MAX}(0, (FSGRINC - FSSTDDED - FSERNDED - FSDEPDED - FSMEDDED) / 2)$ , SHELCAP is the shelter limit (see appendix B), and the final value of FSSLTDED is rounded to the nearest integer.	
FSSLTDE2	C	MARGINAL EFFECTIVENESS FOR SHELTER CARE DEDUCTION: Range = (0, 624) Calculated as: $\text{MAX}(0, FSGRINC - FSDEPDED - FSERNDED - FSMEDDED - FSSTDDED - FSCSEXP) - FSNETINC$ .	
FSSLTEXP	R	REPORTED SHELTER EXPENSES Range = (0, 998)	
FSSTDDED	C	STANDARD DEDUCTION: Range = (118, 269) The standard deduction varies by region. See appendix B for schedule.	

<b><u>VARIABLE</u></b>	<b><u>ORIGIN</u></b>	<b><u>DESCRIPTION</u></b>	<i>Detailed Codebook Unit Benefits</i>
FSSTDDE2	C	MARGINAL EFFECTIVENESS FOR STANDARD CARE DEDUCTION: Range = (0, 404) Calculated as: MAX(0,FSGRINC-FSSLT1-FSERNDED-FSMEDDED-FSDEPDED-FSCSEXP)-FSNETINC, where FSSLT1 is the standard shelter deduction less FSSTDDED.	
FSTOTDED	C	TOTAL DEDUCTIONS: Range = (118, 1614) Sum of FSSTDDED, FSERNDED, FSDEPDED, FSSLTDED and FSMEDDED	
FSTOTDE2	C	MARGINAL EFFECTIVENESS FOR TOTAL DEDUCTION: Range = (0, 1237) Calculated as: FSGRINC-FSNETINC	
RAWERND	R	REPORTED EARNED INCOME DEDUCTION Range = (0, 930) (See FSERNDED for final earned income deduction value)	
SHELCAP	C	MAXIMUM ALLOWABLE SHELTER EXPENSE DEDUCTION: Range = (182, 429) See appendix B for values.	
<b>Unit Benefits</b>			
AMTERR	R	AMOUNT OF COUPON ALLOTMENT IN ERROR: Range = (0, 918) Dollar amount of coupon issuance error for errors of \$6 or more.	
BENMAX	C	MAXIMUM BENEFIT AMOUNT: Range = (119, 2136) The maximum possible coupon allotment for a unit, which varies by unit size and region. See Appendix B for schedule.	
FSBEN	C	FINAL CALCULATED BENEFIT: Range = (1, 1408) Calculated as: FSBEN=MAX(10, BENMAX-ROUND(.3*FSNETINC)) if FSUSIZE is 2 or less, else FSBEN=MAX0, BENMAX-ROUND(.3*FSNETINC))

		1=Born in this State 2=Born in US, but not this State 3=Naturalized citizen 4=Immigrant accorded permanent resident status 5=Alien accorded refugee status 6=Alien granted political asylum 7=Nonimmigrant admitted for a specified period 10=Alien granted a stay of deportation 11=Mexican citizen with 'border' card 12=Undocumented alien (illegal) 13=Not a US citizen but exact status unknown 14=Permanently residing in US under color of law 15=Lawful temporary resident under the legalization provisions of the Immigration Reform and Control Act (IRCA) 16=Lawful permanent resident under the legalization provisions of IRCA 17=Lawful temporary resident under the Special Agricultural Worker (SAW) provision of IRCA 18=Lawful permanent resident under the SAW provisions of IRCA

Under 1996 FSP regulations, persons of citizenship type 7, 11, 12, and 14 are *always* ineligible for the FSP. Nevertheless, some persons with these citizenship types appear in the FSP unit. Such persons will have a '9' appended to their CTZN code (that is, their codes are 79, 119, 129, or 149).

Persons of citizenship type 4-6, 10, 15-18 are eligible for the FSP and should be either included or excluded from the FSP unit according to standard FSP unit definition regulations. Nevertheless, some persons with these citizenship types appear to be treated as ineligible for the FSP--that is, they are excluded from the FSP *and* deem income back to the FSP unit. Such persons will have a '9' appended to their CTZN code (that is, their codes are 49, 59, 69, 109, 159, 169, 179, 189).

<sup>1</sup>May have been edited to obtain consistency between final gross income (FSGRINC) and person-level income amounts.

## **APPENDIX A**

### **AUTOMATED EDITS TO FSP UNITS WITH ALIENS**

## **APPENDIX A**

### **AUTOMATED EDITS TO FSP UNITS WITH ALIENS**

Inconsistencies in the way that alien data are reported in the IQCS and the way that they are subsequently edited in the creation of the QC database makes reform simulations involving aliens difficult and relatively inaccurate. In 1995 we identified and edited inconsistent cases manually to address these problems. However, since manually editing the QC database is both time consuming and prone to error, we developed a set of algorithms to identify and correct these problems automatically during the recode program. This appendix describes what the algorithm looked for and what corrections were made.

#### **1. INCONSISTENT CODING OF CITIZENSHIP STATUS CODES**

**Problem:** The citizenship status variable (CTZN) is often coded incorrectly for those people in the FSP unit. Persons with CTZN codes of 7, 11, 12, and 14 are not eligible for the FSP and thus should never be in an FSP unit.

**Solution:** People in the FSP unit with CTZN codes of 7, 11, 12 or 14 had CTZN changed to 79, 119, 129, or 149 respectively.

#### **2. INCONSISTENT REPORTING OF DEEMED AFDC INCOME**

**Problem:** Some aliens outside the FSP unit deem AFDC income to people in the FSP unit but this income is not accounted for correctly within the FSP unit.

**Solution:** First, we identified households in which, (1) no child in the FSP unit has any earned or unearned income; (2) total person level income in the FSP unit is less than the units reported gross income; and (3) the discrepancies between person and unit level income appears to be caused by an alien head of household, spouse, or parent

outside the FSP unit who is deeming AFDC income. Once we identify these cases, the AFDC income of the first child inside the FSP unit without AFDC income is adjusted to reflect the amount deemed from outside the FSP unit. Additionally, those aliens outside the FSP unit who are found to deem AFDC income and who have CTZN codes of 4, 5, 6, 10, 15, 16, 17, or 18 had their CTZN codes changed to 49, 59, 69, 109, 159, 169, 179, or 189, respectively.

### **3. INCONSISTENT REPORTING OF DEEMED WAGE INCOME**

#### 4. CODING ALGORITHM

The code below is the SAS code used in the recode program to identify and correct the three problems above.

```
*** set up temporary variables ***;
INSUM1=0;    ** Sum of all income of FS persons with age=>0 and age<18 **;

## **APPENDIX C**

### **FY 1996 FSP PARAMETERS**

### FSP NET INCOME SCREEN, FY 1996

Household Size	Income Screen (Dollars Per Month)		
	Continental U.S., Guam and Virgin Islands	Alaska	Hawaii
1	\$623	\$779	\$718
2	836	1,045	963
3	1,050	1,312	1,208
4	1,263	1,579	1,453
5	1,476	1,845	1,698
6	1,690	2,112	1,943
7	1,903	2,379	2,188
8	2,116	2,645	2,433
Each Additional	+214	+267	+245

SOURCE: U.S. Department of Agriculture, FCS.

NOTE: The fiscal year 1996 FSP net income limits are based on the 1995 poverty guidelines which were issued by the Department of Health and Human Services and published in the February 1995 Federal Register. FCS derived the fiscal year 1996 net income limits by dividing the 1995 poverty guidelines by 12 and rounding up to the nearest dollar. The 1995 poverty guidelines were developed on the basis of the 1994 Census poverty thresholds. The net income screen is effective from October 1, 1995 to September 30, 1996.

## STANDARD DEDUCTION, FY 1996

Area	Standard Deduction
Alaska	\$229
Hawaii	189
Guam	269
Virgin Islands	118
Continental U.S.	134

SOURCE: U.S. Department of Agriculture, FCS.

NOTE: The standard deduction is adjusted each October 1 to reflect changes in the CPI-U for nonfood items and is effective from October 1, 1995 to September 30, 1996.

## SHELTER AND DEPENDENT CARE LIMITS, FY 1996

Area	Shelter Limit (10/1/95-12/31/96)	Dependent Care Limit <sup>a,b</sup> (per dependent)
Alaska	\$429	\$160
Hawaii	353	160
Guam	300	160
Virgin Islands	182	160
Continental U.S.	247	160

<sup>a</sup>The household limit on the dependent-care deduction is equal to the maximum dependent-care deduction multiplied by the number of dependents in the household.

<sup>b</sup>The higher dependent-care deduction pertains to dependents under age 2; the lower deduction is for dependents age 2 or more.

SOURCE: U.S. Department of Agriculture, FCS.

NOTE: The maximum limit for excess shelter expense deductions is adjusted each October 1 to reflect changes in the shelter, fuel and utilities component of the CPI-U and is effective from October 1, 1995 to September 30, 1996.

### MAXIMUM BENEFITS, FY 1996

Household Size	Guam	Alaska Urban	Alaska Rural I	Alaska Rural II	Hawaii	Virgin Islands	Continental U.S.
1	\$175	\$153	\$195	\$237	\$198	\$153	\$119
2	322	280	357	435	364	281	218
3	461	401	512	623	522	402	313
4	586	510	650	791	663	511	397
5	696	605	772	939	787	607	472
6	835	726	926	1,127	945	728	566
7	923	803	1,024	1,246	1,044	805	626
8	1,055	918	1,170	1,424	1,193	920	716
Each Additional	+132	+115	+146	+178	+149	+115	+90

SOURCE: U.S. Department of Agriculture, FCS.

NOTE: The maximum benefit values are effective from October 1, 1995 to September 30, 1996.
